Grade 6 Accelerated
Unit 7
Lesson 2 Practice

Name_Answer Key________
Date___________________
Period__________________

Four triangles are shown on the grids. For each triangle, a base and its corresponding height are labeled. The side length of each square is 1 inch (in.). Find the area of each triangle. Show your work and include units.

1.		$\underbrace{7 \cdot 15}_{105 \cdot 0.5} \cdot 0.5 = 52.5$ Area = 52.5 or $52\frac{1}{2}$ in^2
2.		$\underbrace{8 \cdot 5}_{40 \cdot 0.5} \cdot 0.5 = 20$ Area = 20 in^2
3.		$\underbrace{12 \cdot 8}_{96 \cdot 0.5} \cdot 0.5 = 48$ Area = 48 in^2
4.		$\underbrace{9 \cdot 7}_{63 \cdot 0.5} \cdot 0.5 = 31.5$ Area = 31.5 or $31\frac{1}{2}$ in^2

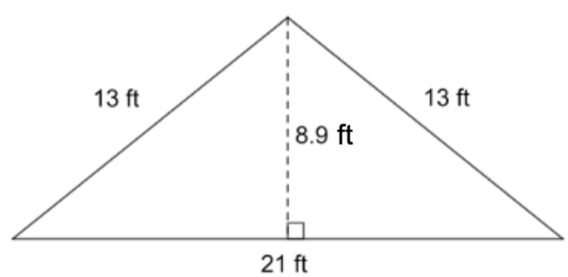
For each triangle below, circle the base measurement and put a square around the height measurement. Then, use the base and height to find the area of each triangle. Show your work and include units.

5.		$\underbrace{25 \cdot 12} \cdot 0.5$ $300 \cdot 0.5 = 150$ Area = 150 cm^2
6.		$\underbrace{23.3 \cdot 13.5} \cdot 0.5$ $314.55 \cdot 0.5 = 157.275$ Area = 157.275 mm^2
7.		$34 \cdot 28.3 \cdot 0.5$ $962.2 \cdot 0.5 = 481.1$ Area = 481.1 ft^2
8.		$\underbrace{22.5 \cdot 18} \cdot 0.5$ $405 \cdot 0.5 = 202.5$ Area = 202.5 m^2

Jack found the area of the triangle shown. His work is also shown.

Area = $21 \times 13 \times 0.5$

Area = $136.5\ ft^2$



9. Explain why Jack's answer is incorrect.
Jack used a side length when he should have multiplied by the height, 8.9 ft.

10. Find the correct area of the triangle.
$21 \cdot 8.9 \cdot 0.5 = 93.45\ ft^2$
