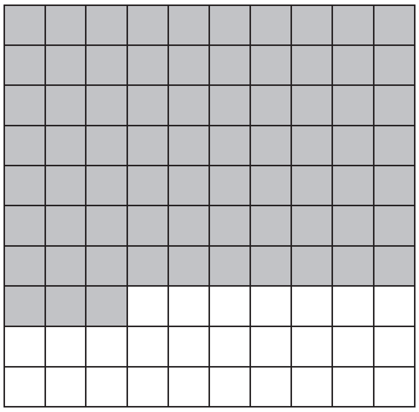
Grade 6 Name____________________
Unit 3 Date____________________
Lesson 2 Practice Period____________________

1. A model representing a numerical value is shown.



Write the numerical value represented by the model as a fraction and as a percentage.

As a Fraction	As a Percentage

Convert each fraction to a percentage by generating an equivalent fraction with a denominator of 100.

	Original Fraction	Equivalent Fraction with a Denominator of 100	Percentage
Example	$\frac{17}{20}$	$\frac{17}{20} \times \frac{5}{5} = \frac{85}{100}$	85%
2.	$\frac{37}{50}$	$\frac{37}{50} \times \frac{}{} = \frac{}{100}$	
3.	$\frac{7}{10}$		
4.	$\frac{9}{4}$		

Convert each fraction to a percentage and each percentage to an equivalent fraction. Simplify any fractions if possible.

	Fraction	Percentage
5.	$\frac{19}{25}$	
6.		15%
7.		62%
8.	$\frac{6}{5}$	
9.		125%

10. Hiro said that $\frac{3}{5}$ is equivalent to 75% because $\frac{3}{5} \times \frac{25}{25} = \frac{75}{100} = 75\%$. Explain whether you agree with Hiro.
