Grade 6 Accelerated
Unit 3
Lesson 3 Homework

Name__Answer Key________
Date______________________
Period_____________________

Explain why each inequality statement is true or false.

1. $-\frac{1}{3} > -\frac{3}{2}$

True, $-\frac{1}{3}$ is closer to zero and farther right on a number line than $-\frac{3}{2}$ is.

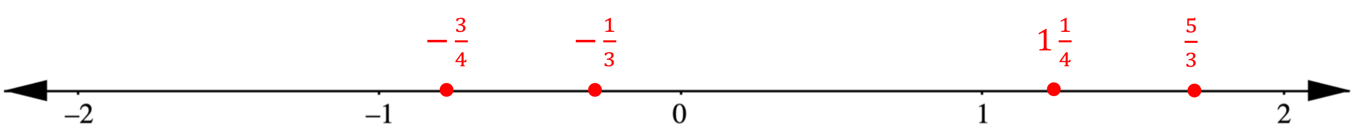
2. $-2\frac{2}{5} > -\frac{9}{4}$

False, $-2\frac{2}{5}$ is less than $-\frac{9}{4}$ as it is farther left on the number line than $-\frac{9}{4}$ is.

A set of rational numbers is shown.

$$-\frac{3}{4}, \quad 1\frac{1}{4}, \quad \frac{5}{3}, \quad -\frac{1}{3}$$

3. Plot each of the values on the number line. Label each point with its numeric value.



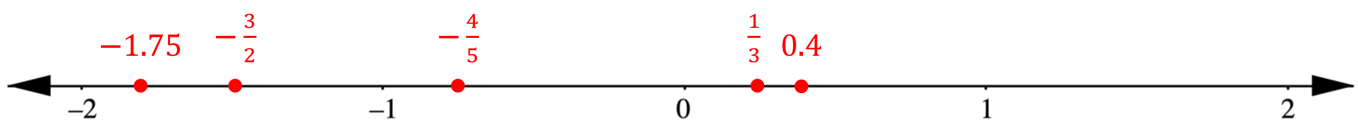
4. Complete the inequality statement to show the relationship between the values.

$$-\frac{3}{4} < -\frac{1}{3} < 1\frac{1}{4} < \frac{5}{3}$$

A set of rational numbers is shown.

$$-\frac{3}{2}, \qquad -1.75, \qquad \frac{1}{3}, \qquad -\frac{4}{5}, \qquad 0.4$$

5. Plot each of the values on the number line. Label each point with its numeric value.



6. Complete the inequality statement to show the relationship between the values.

$$-1.75 < -\frac{3}{2} < -\frac{4}{5} < \frac{1}{3} < 0.4$$

Complete each statement using <, >, or =.

7. $-\frac{5}{2} < -2\frac{1}{3}$

8. $-0.6 < \frac{3}{5}$

9. Order the values from least to greatest.

$$-3\frac{2}{3}, \qquad -\frac{7}{2}, \qquad \frac{9}{10}, \qquad -\frac{9}{10}, \qquad 0, \qquad 1\frac{1}{4}$$

$$-3\frac{2}{3}, -\frac{7}{2}, -\frac{9}{10}, 0, \frac{9}{10}, 1\frac{1}{4}$$

10. Order the values from least to greatest.

$$-2.8, \qquad -\frac{8}{3}, \qquad \frac{11}{4}, \qquad -2.25, \qquad 2\frac{1}{5}$$

$$-2.8, -\frac{8}{3}, -2.25, 2\frac{1}{5}, \frac{11}{4}$$
