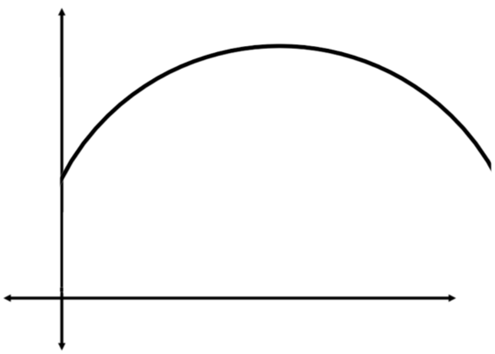
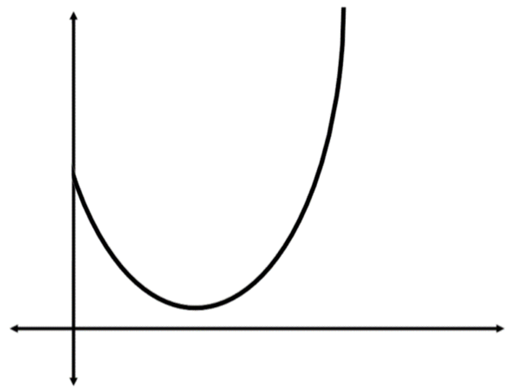
Grade 8
Unit 10
Lesson 5 Practice

Name_Answer Key________
Date___________________
Period_________________

Use the two graphs to complete questions 1–5:

Graph A	Graph B
	




1. Complete the table by writing the letter of the graph that matches each description, then label the independent and dependent variables.

Description	Graph	Independent Variable	Dependent Variable
The temperature from noon to 6:00PM.	A	time	temperature
The temperature from 3:00AM to 9:00AM.	B	time	temperature

2. Complete the statement.

Graph
- o A
- o B

shows the function
- o decreasing
- o increasing
- o remaining constant

then
- o decreasing
- o increasing
- o remaining constant

over the interval shown to model how the
- o number of hours
- o temperature

changes over the
- o number of hours.
- o temperature.

Answers may vary for the first three boxes.
If students choose:

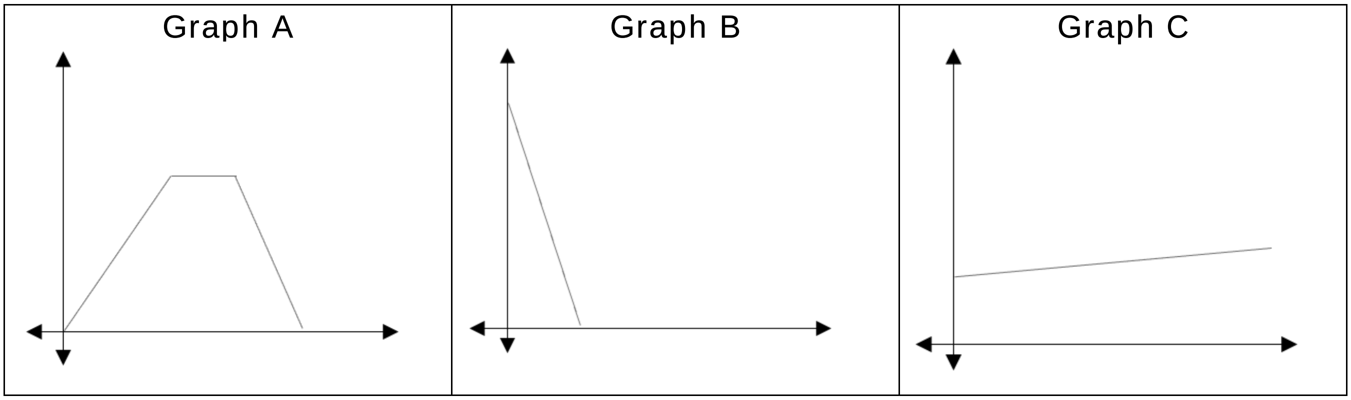
A → increasing
decreasing

B → decreasing
increasing

3. Create an additional scenario that would be modeled by Graph A.
Answers may vary.
Distance from sea level at different times while hiking a mountain

4. Create an additional scenario that would be modeled by Graph B.
Answers may vary
A stock's performance on different days of the week

Use the three graphs to complete questions 5–10:



5. What would be the appropriate label for the y-axis?
Answers will vary.
-distance, height, etc.

6. Which graph could represent the path of Jose as he walks quickly from his friend's house to his own home?
B

7. Which graph has a constant interval?
A

8. Which graph shows a function that is decreasing?
B

9. Write a story involving Jose that could be depicted by Graph C.
Answers will vary.
Jose walked slowly from his friend's house to school.

10. You overhear a classmate state that if time is the independent variable and distance from home is the dependent variable, then in Graph A, Jose goes up a hill walks across the mountain and comes down the other side. Explain to your friend the mistake in their reasoning.
Answers may vary.
A constant interval would mean the distance stayed the same while time increased which would mean there was a time when Jose stopped walking.
