Quarter 1 Summary of Instructional Units

Units are linked to the SCPS Frameworks site. Bolded benchmarks are assessed on the current quarter assessment. The benchmarks that are not in bold may be assessed in the following quarter.

Unit 1 - Number Sense & Operations w/Positive Numbers	With 7 lessons over 11 recommended instructional days, this unit covers benchmarks **MA.6.NSO.3.1**, **MA.6.NSO.3.2**, **MA.6.NSO.2.1**, and **MA.6.NSO.2.2**. In this unit, students begin by exploring methods for finding the least common multiple (LCM) and greatest common factor (GCF) using the distributive property and other strategies. Students then build upon previous practice with decimal and fraction multiplication and division by connecting visual models to the standard algorithm and practicing a variety of strategies to improve arithmetic accuracy. This unit builds upon previously learned skills in 5th grade, including fraction and

	decimal operations, factors and multiples, and the distributive property. Later in this course and in the 7th grade accelerated course, students will use the skills from this unit to write equivalent expressions and equations and solve two-step equations.
Unit 2 - Fractions, Percentages, and Decimals	With 7 lessons over 10 recommended instructional days, this unit covers benchmarks **MA.6.NSO.3.5** and **MA.6.NSO.2.3**. In this unit, students learn how to rewrite rational numbers in different but equivalent forms, including fractions, decimals, and percentages. Students solve multi-step real-world problems using the four mathematical operations. In the 6th grade accelerated course Unit 1, students focused on performing operations with fractions and decimals fluently, which will apply in this unit when they are solving real-world problems. In the 6th grade accelerated course Units 13 and 14, students will use knowledge learned in this unit to help write expressions and equations to represent real-world contexts, including solving one-step equations that represent those contexts. The knowledge and skills developed in these first two units of this course will continue to be spiraled throughout the remainder of the course as students develop procedural fluency with rational numbers by the end of the course.
Unit 3 - Understanding Rational Numbers	With 9 lessons over 12 recommended instructional days, this unit covers benchmarks **MA.6.NSO.1.1**, **MA.6.NOS.1.2**, **MA.6.NSO.1.3**, and **MA.6.NSO.1.4**. In this unit, students are introduced to negative rational numbers. They learn how to plot, order, compare, and find opposites of rational numbers. This is students' first formal introduction to negative numbers, extending the number line and their knowledge of performing operations and comparing positive values, and interpreting the meaning of rational numbers in various contexts. Students are also introduced to absolute value for the first time, including interpreting its meaning in various contexts and using absolute values to solve problems. This unit lays the foundation for Grade 6 Accelerated Unit 11 where students will perform operations with rational numbers and solve real-world problems with rational numbers.
Unit 4 - The Coordinate Plane	With 6 lessons over 8 recommended instructional days, this unit covers benchmarks MA.6.GR.1.1, MA.6.GR.1.2, and MA.6.GR.1.3. *While instruction on this unit is recommended to be completed prior to the end of Quarter 1, this unit will not be assessed on the Quarter 1 Benchmark Assessment.* Students were introduced to the coordinate plane in Grade 5 mathematics as they made connections between the number line and the coordinate plane. Instruction in Grade 5 focused only on quadrant 1. In Grade 6 Accelerated, students extend their understanding of the coordinate plane to include all four quadrants. Students review plotting integers and comparing their locations on the coordinate plane in relation to the axes, the different quadrants, and their relationships to each other. Students use this knowledge to help them compare and explore the similarities and differences between the coordinates of points that make a vertical or horizontal line. Students then learn about reflecting points on the coordinate plane over the x- and y-axis. Instruction here lays the foundation for transformations they will perform on figures in the coordinate plane in the Grade 7 Accelerated Math course.
