Grade 8 Name____________________
Unit 8 Date____________________
Lesson 3 Practice Period__________________

Use algebra tiles to solve the equation $4x - 3 = x + 9$.

1. Complete the table to describe the process for solving the equation.

Algebra Tile Model	**Description**	**Algebraic Equation**
	Given Equation	$4x - 3 = x + 9$
	Add _______ to both sides of the equation to create zero pairs.	
	Add _______ to both sides of the equation to create zero pairs.	
	Divide both sides of the equation into _____ equal groups.	

2. Based on the work done in the table, what is the solution to $4x - 3 = x + 9$?

3. Solve each equation by following the steps described in the table.

Description	Algebraic Equation
Begin with the given equation.	$5(1.2m - 0.3) = -2m + 1.7$
Apply the distributive property.	
Eliminate the constant term from one side of the equation using zero pairs.	
Eliminate the variable term from one side of the equation using zero pairs.	
Isolate the variable.	

4. Check your answer for question #3 using substitution.

5. Solve the equation $8 - k = 3k + 20$.

6. Check your answer using substitution.

7. Solve the equation $4(s - 5) = 9s + 25$.

8. Check your answer using substitution.

9. Solve the equation $3(1 - 3p) = 6(p - 7)$.

10. Check your answer using substitution
