Grade 6 Accelerated
Unit 13
Lesson 10 Practice

Name____________________
Date____________________
Period__________________

Determine if the expressions are equivalent for the given values.

	Value	$8x + 4x - 5$	$2(6x - 8) + 11$	Equivalent?
1.	$x = -4$			o yes o no
2.	$x = 0$			o yes o no
3.	$x = 0.5$			o yes o no
4.	$x = \frac{1}{3}$			o yes o no

5. Depending on the value being substituted into the expressions, the evaluated expressions

o always
o sometimes
o never

had the same value as each other.

Determine whether the expressions are equivalent for the given values.

		$\frac{1}{5}(15 + 20y) + 2x$	$4\left(2x + y + \frac{3}{4}\right)$	**Equivalent?**
6.	$x = -2$ $y = 6$			o yes o no
7.	$x = 0$ $y = 1$			o yes o no
8.	$x =$ __ $y =$ __			o yes o no

Determine if the following algebraic expressions are equivalent using any method you choose.

	Expression A	**Expression B**	**Equivalent?**
9.	$x(13 - 15) - \frac{3}{2}(4 + 6x)$	$-11x - 15$	o yes o no
10.	$\frac{5}{7}(2x + 12x) - (6^2)$	$-36 + 10x$	o yes o no
