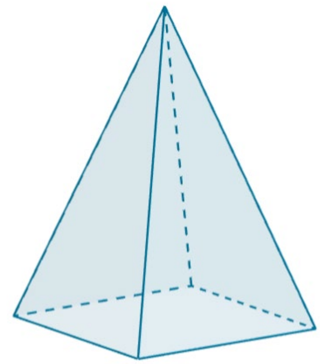
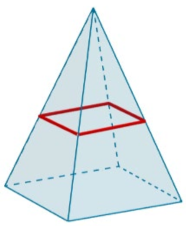
Geometry
Unit 9
Lesson 3 Practice

Name____________________
Date_____________________
Period___________________

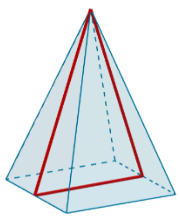
A rectangular pyramid is shown.



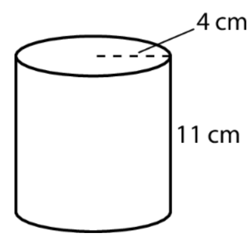
1. Draw a cross section parallel to the base.

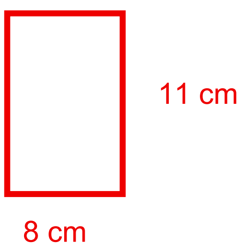


2. Draw a cross section perpendicular to the base.

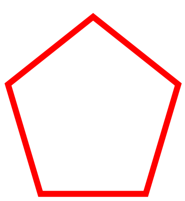


3. A cylinder is shown with height of 11 centimeters (cm) and a radius of 4 cm. Draw the cross section formed by the intersection of the cyldiner and a plane perpendicular to the base. Label the units.

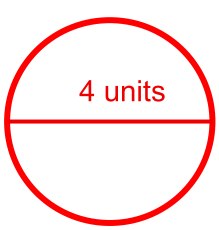




4. Draw a cross section formed by the intersection of a pentagonal prism and a plane that is parallel to the base.

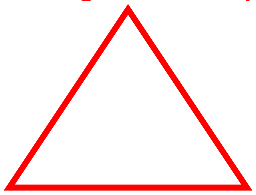


5. Draw a cross section formed by the intersection of a sphere with a diameter of 4 units and a plane passing through the center of the sphere. Label the units.



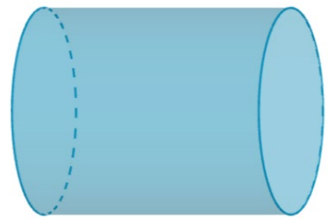
6. Draw a cross section formed by the intersection of a triangular prism and a plane parallel to its the base.

Drawings will vary.



A cylinder is shown.

7. Describe the shape of a cross section parallel to the base.

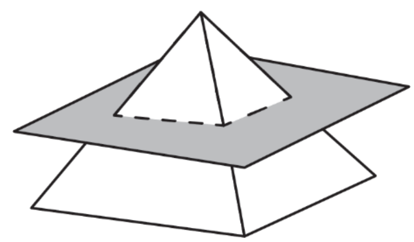


The cross section will be a circle.

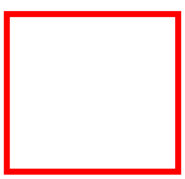
8. Describe the shape of a cross section perpendicular to the base.

The cross section will be a rectangle.

9. A square pyramid is shown. Draw the cross section formed by the intersection of the pyramid and the horiztonal plane passing through the pyramid.



Drawings will vary.



10. An ice cream cone is shown. What two-dimensional shape is created by a vertical cross section going through the ice cream cone?

The cross section will be an isosceles triangle.
