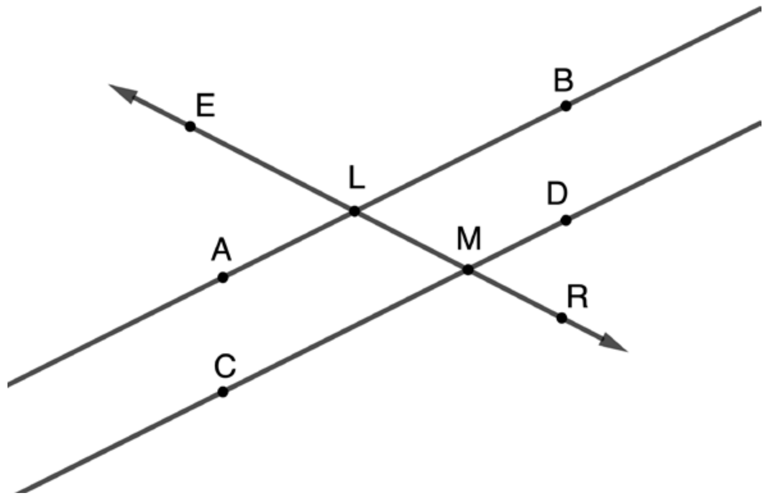
Geometry Name____________________
Unit 3 Date____________________
Lesson 5 Practice Period__________________

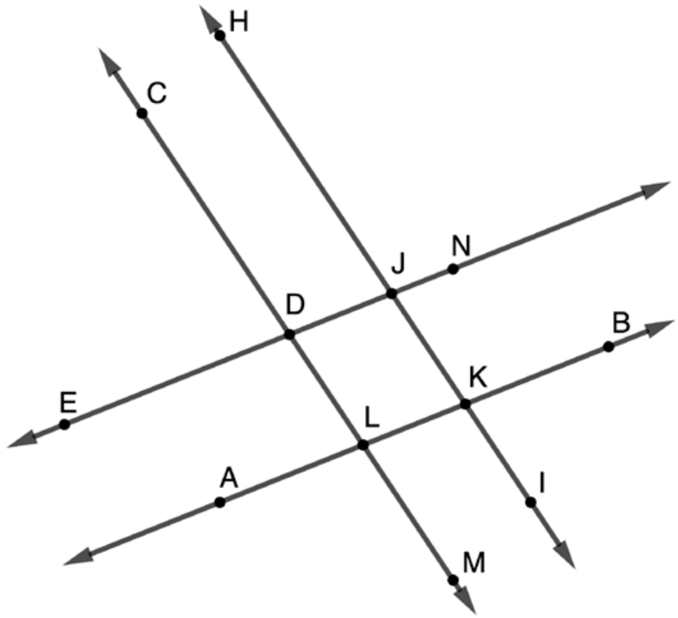
1. Three lines are shown, $\overleftrightarrow{AB}$, $\overleftrightarrow{CD}$, and $\overleftrightarrow{ER}$. $\overleftrightarrow{ER}$ intersects $\overleftrightarrow{AB}$ and $\overleftrightarrow{CD}$.



Determine if the given condition could be used to justify that $\overleftrightarrow{AB} \parallel \overleftrightarrow{CD}$**.** Then, justify your answer.

Condition	**Is $\overleftrightarrow{AB} \parallel \overleftrightarrow{CD}$?**	**Justification**
If $m\angle ELA = 78°$, then $m\angle DMR = 78°$	o Yes o No	
$\angle ALM \cong \angle CMR$	o Yes o No	
$m\angle ELA + m\angle ELB = 180°$	o Yes o No	
$\angle ELB \cong \angle CMR$	o Yes o No	
$\angle LMC \cong \angle DMR$	o Yes o No	
If $m\angle ELB = 95°$, then $m\angle ELA = 85°$	o Yes o No	
If $m\angle DMR = 81°$, then $m\angle ALM = 99°$	o Yes o No	

2. $\overleftrightarrow{CM}$, $\overleftrightarrow{HI}$, $\overleftrightarrow{EN}$, and $\overleftrightarrow{AB}$ are shown, where $m\angle CDE = 90°$.



Determine if the given conditions could be used to justify that $\overleftrightarrow{EN} \parallel \overleftrightarrow{AB}$ or $\overleftrightarrow{CM} \parallel \overleftrightarrow{HI}$.

Condition	Is $\overleftrightarrow{EN} \parallel \overleftrightarrow{AB}$ or $\overleftrightarrow{CM} \parallel \overleftrightarrow{HI}$?	Justification
$\angle CDE \cong \angle HJN$	o Yes o No	
$\angle CDJ \cong \angle DLK$	o Yes o No	
$m\angle EDL + m\angle NJK = 180°$	o Yes o No	
$\angle KJD \cong \angle HJN$	o Yes o No	
$\angle JKL \cong \angle BKI$	o Yes o No	
$m\angle BKI + m\angle LKI = 180°$	o Yes o No
