Grade 7 Name____________________
Unit 1 Date____________________
Lesson 1 Practice Period____________________

For questions 1-4, identify whether each question is statistical or not statistical. If it is not, rewrite the question so that it can be statistical.

1. How many days are in January?

2. What percent of students at school take the bus?

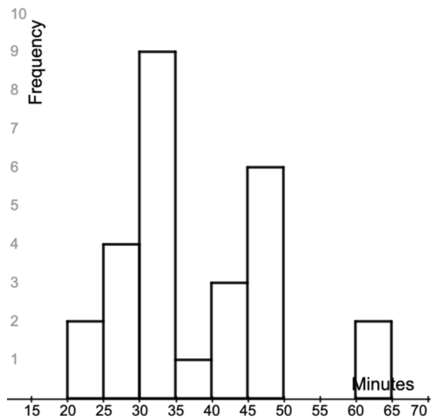
3. How old is your cat?

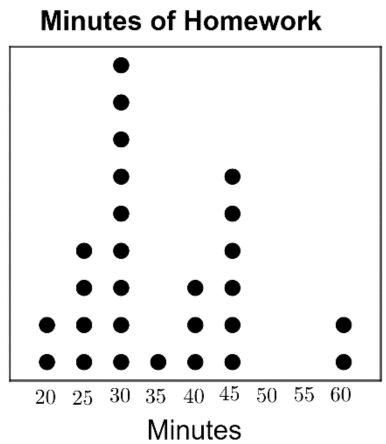
4. What is the most popular favorite flavor of ice cream amongst 7th graders?

5. What color buttons are in the jar?

For questions 6-10, use the scenario.

Teachers at Sanford Middle School were collecting data to determine approximately how much homework 7th graders received daily. They made a histogram and a line plot using the data they collected from surveying a sample of students.





6. Which graph can be used to determine how many students were surveyed?

7. How many students were surveyed?

8. What percentage of students reported spending 35 minutes or less on homework every night? Round to the nearest tenth.

9. What is the range of minutes spent on homework?

10. Are there any outliers? If so, name them.

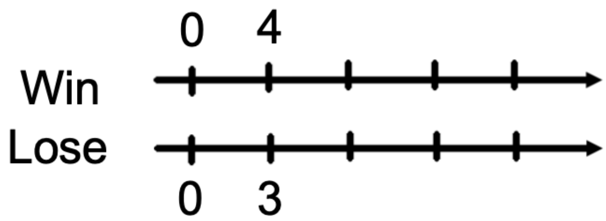
Lesson 2 Practice Period____________________

The Tampa Bay Thunder high school soccer team recently finished their spring season. The ratio of wins to losses during the season was $4:3$.

1. Complete the double number line below using the ratio.



2. If the team lost 9 games, how many did they win?

3. If the team played 35 games in the season, how many did they lose?

Three friends decided to take a road trip from Jacksonville to New Orleans to see a football game. They split up the drive amongst them and switched drivers every time they stopped for gas or food. Their driving times and distances are recorded in the table below.

4. Complete the table to determine the unit rate for each friend. Round to the nearest tenth is needed.

Name	Distance (miles)	Time (hours)	Unit Rate (miles per hr.)
Mitch	202	3.5	$\frac{\square}{\square} = \square$
Timothy	162	3	$\frac{\square}{\square} = \square$
Jackson	147	2.5	$\frac{\square}{\square} = \square$

5. Who was driving the fastest?

6. If Timothy drove the entire way back at the same speed he drove on the way to New Orleans, how long would it take to get back? Round to the nearest tenth, if needed.

An electronic store is having a sale where all items are 70% of their original price.

7. If all items are 70% of their original price, what is the percent discount will customers receive?

8. A new 4K TV originally costs $\$2500$. Complete the table.

Price($)	**Percentage**
	10
	30
	70
	100

9. What is the amount of discount on the TV?

10. What is the sale price of the TV?

Unit 1 Date______________________
Lesson 3 Practice Period_____________________

For questions 1-4, use the five rational values shown.

$$-1\frac{3}{4}, \qquad 57\%, \qquad 0.624, \qquad -2.2, \qquad 1.95$$

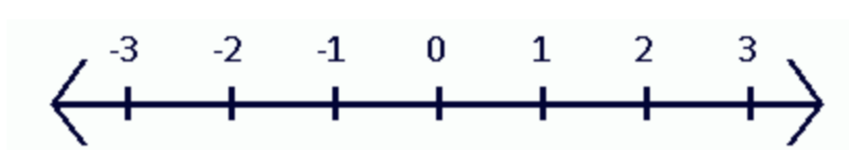
1. Which value is the smallest?

2. Which value is the largest?

3. Write each number as a ratio of two integers.

Number	Ratio of Two Integers
$-1\frac{3}{4}$	
57%	
0.624	
-2.2	
1.95	

4. Plot each value on the number line. Label each point with its numeric value.



5. True or False? *The absolute value of a number is always the opposite value.*

6. The distance a number is from zero on the number line is called the

________________________.

For questions 7-10, use <, >, or = to compare each pair of values.

7. $|-13|$ __________ -14.6

8. $|-26\,\frac{1}{4}|$ __________ $|26.25|$

9. 15.31 ________ $|9.75|$

10. Identify the value(s) that make the statement below true.

$|\ \_\_\_\_\_\_\_\ | = 8.32$

Grade 7

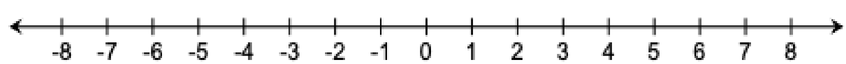
Model each addition or subtraction using the integer chip model and the number line model.

1. $-4 - 3 =$ __________

Integer Chip Model	Number Line Model
	
2. $-3 + 11 =$ __________

Integer Chip Model	Number Line Model
	
3. $-6 - (-8) =$ __________

Integer Chip Model	Number Line Model
	


4. When multiplying or dividing integers with the **same** sign, the sign of product or quotient will be

- ○ positive.
- ○ negative.

5. When multiplying or dividing integers with **opposite** signs, the sign of product or quotient will be

- ○ positive.
- ○ negative.

Evaluate each expression.

6. $-156 + (-97)$

7. $63 \div (-9)$

8. $-8 \cdot (-7)$

9. $-34 - (-17)$

10. -6×5

Period______________________

1. In order to solve the equation $-12 = x + 7$,
- ○ add 7.
- ○ subtract 7.
- ○ multiply by 7.
- ○ divide by 7.

The solution to the equation is _________.

2. In order to solve the equation $\frac{y}{-3} = -5$,
- ○ add -3.
- ○ subtract -3.
- ○ multiply by -3.
- ○ divide by -3.

The solution to the equation is _________.

3. In order to solve the equation $-55 = 11b$,
- ○ add 11.
- ○ subtract 11.
- ○ multiply by 11.
- ○ divide -by 11.

The solution to the equation is _________.

4. In order to solve the equation $a - 17 = -9$,
- ○ add 17.
- ○ subtract 17.
- ○ multiply by 17.
- ○ divide by 17.

The solution to the equation is _________.

For questions 5 - 10, solve each equation using inverse operations.

5. $-2c = -18$ __________

6. $6 = -10 + c$ __________

7. $c - 8 = -23$ __________

8. $6 = \frac{c}{-7}$ __________

9. $7 = c + (-3)$ __________

10. $6y = -54$ __________

Grade 7 Name____________________
Unit 1 Date____________________
Lesson 6 Practice Period____________________

Quinn went shopping at her favorite store. She spent $96 on four shirts that each cost the same amount. What is the cost of each shirt?

1. Write an algebraic equation to represent the relationship.

2. What does the variable in your equation represent?

3. Solve the equation.

The students at Paul's middle school want to make $350 in a bake sale to raise money for an upcoming trip. They have already made $98. How much more money must they make to reach their goal?

4. Write an algebraic equation to represent the relationship.

5. What does the variable in your equation represent?

6. Solve the equation.

For questions 7 - 8, use the equation $x + 5 = 24$.

7. Create a real-world problem that the equation could represent.

8. Identify what the variable represents in your scenario.

For questions 9 - 10, use the equation $\frac{b}{7} = 3$.

9. Create a real-world problem that the equation could represent.

10. Identify what the variable represents in your scenario.
