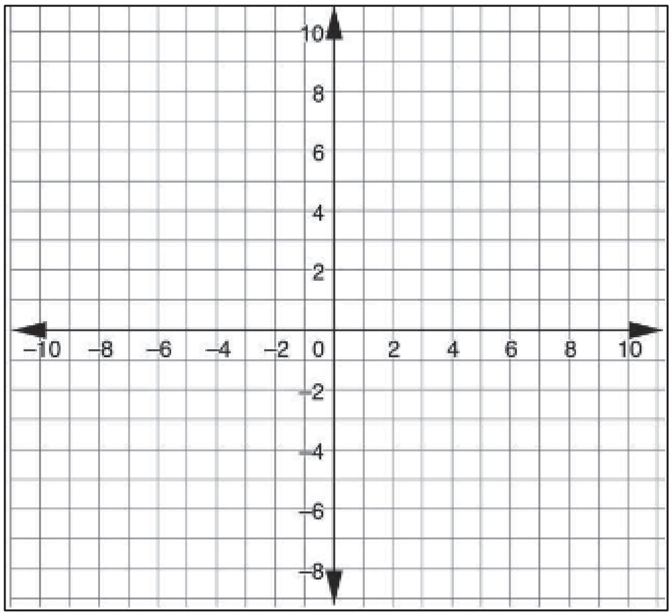
Geometry
Unit 13
Lesson 1 Practice

Name____________________
Date_________________
Period__________

1. Graph the equations on the coordinate plane:

$y = -\frac{1}{2}x + 7$ $\qquad$ $y = 2x - 3$

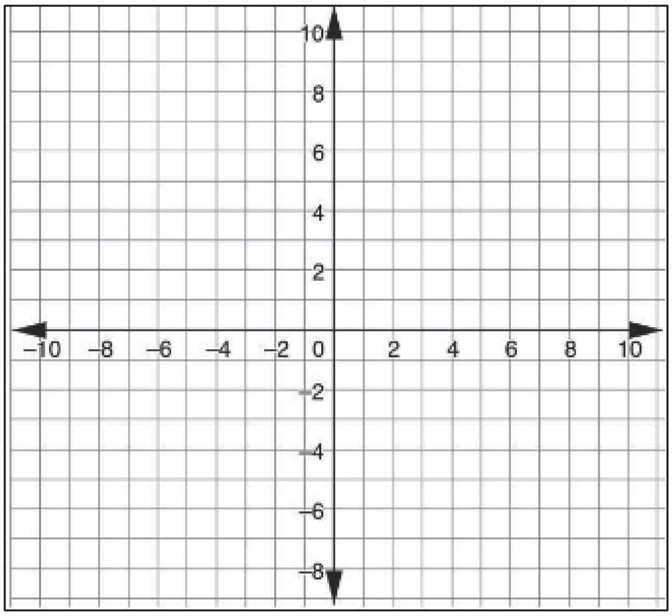


2. The equations $y = -\frac{1}{2}x + 7$ and $y = 2x - 3$ resulted in
   - ○ parallel
   - ○ perpendicular
   - ○ vertical

   lines.

3. The slopes of the equations are
   - ○ equal.
   - ○ undefined.
   - ○ opposite reciprocals.

4. Rewrite the equation $7y - x = -28$ in slope intercept form and graph the equation using slope-intercept form.



5. Determine if $y = -7x + 4$ is parallel, perpendicular, or neither to the graph of the equation $7y - x = -28$.

6. Graph the equation $y = -7x + 4$ on the graph to verify your answer to question 5.

7. Which equation represents a line which is perpendicular to the line $y = \frac{3}{8}x - 1$?

- ☐ $3x + y = -40$
- ☐ $3x - 8y = -56$
- ☐ $3y - 8x = 3$
- ☐ $8x + 3y = 9$

8. Which equation represents a line which is parallel to the line $y = -\frac{2}{3}x + 1$?

- ☐ $2x - 3y = 21$
- ☐ $2y - 3x = 2$
- ☐ $3x - 2y = -2$
- ☐ $2x + 3y = -21$
