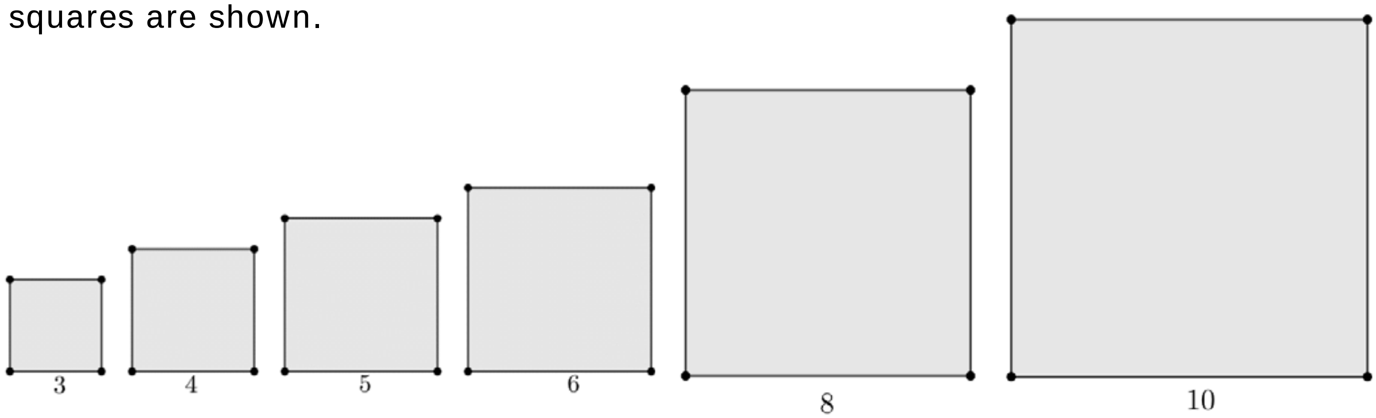
Geometry Name____________________
Unit 7 Date____________________
Lesson 1 Practice Period___________________

Six squares are shown.

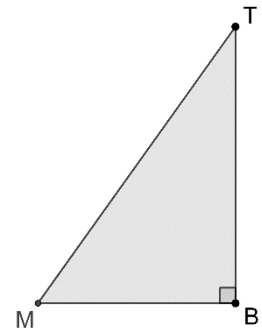


The side measures of right triangle NWC are: $WC = 6$, $WN = 8$, and $NC = 10$.

1. To show a visual proof of the Pythagorean theorem which square, if any, should be placed along $\overline{WN}$?

2. To show a visual proof of the Pythagorean theorem which square, if any, should be placed along $\overline{WC}$?

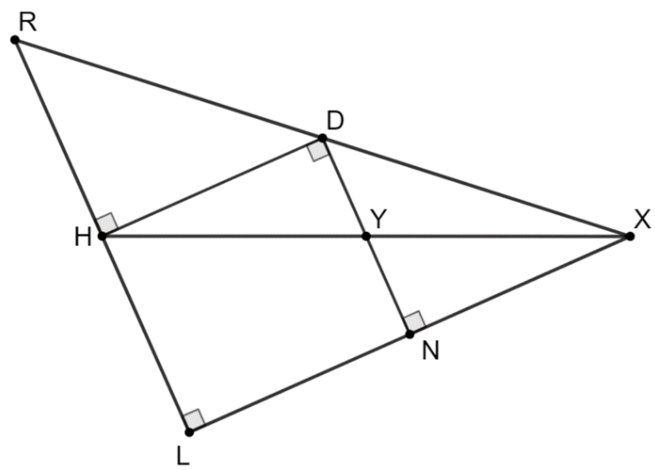
3. $\triangle MTB$ is shown where $MT = \sqrt{74}$ and $MB = 5$.
Find the exact length of $\overline{BT}$.



4. A right triangle has side lengths of $6\sqrt{3}$ and $\sqrt{15}$. Find the exact length of the hypotenuse.

5. Triangle RLX is shown where $LN = NX$, $RL = 8.766$, $XR = 13.184$, and $YX = 5.39$.

Determine the length of $\overline{NY}$. If necessary, round your answer to the nearest thousandth.



$\triangle BNP$ is shown. Complete the table by finding the missing lengths. Round your answer to the nearest thousandth. Show your work below the table.

	Length of $\overline{BN}$	Length of $\overline{NP}$	Length of $\overline{BP}$
6.	48		73
7.		5	$\sqrt{42}$
8.	7	$\sqrt{95}$	
9.	33		65
10.		$\sqrt{2}$	$\sqrt{29}$
