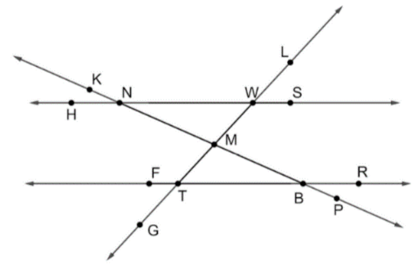
Geometry: Unit 3, Lesson 4

1. Lines HS, FR, GL, and KP are shown. $\overleftrightarrow{HS} \parallel \overleftrightarrow{FR}$ with $\overleftrightarrow{KP}$ and $\overleftrightarrow{GL}$ as traversals. What type of angles are $\angle NMW$ and $\angle TMB$



2. $\angle THR$ and $\angle BLZ$ are alternate interior angles. If $m\angle THR = (2x - 6)°$ and $m\angle BLZ = (7x - 9)°$, what is the value of x?

3. An incomplete proof is shown. What is the reason for statement 3?

Statement	Reason
1. $m\angle FDT + m\angle KNW = 180°$	1. Given
2. $m\angle KNW = 79°$	2. Given
3. $m\angle FDT + 79° = 180°$	3. ________________

Given: $m\angle FDT + m\angle KNW = 180°$ and $m\angle KNW = 79°$

Prove: $m\angle FDT + 79° = 180°$
