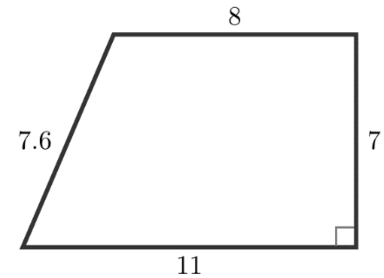
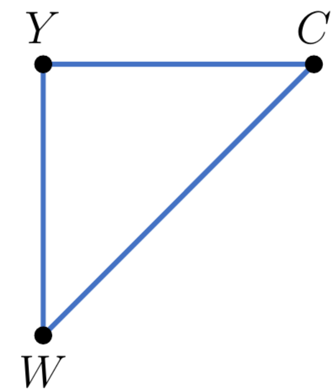
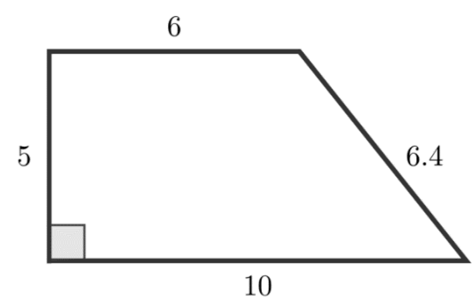
Geometry: Unit 13, Lesson 13

1. A trapezoid is shown, with lengths marked on the figure. The area of the trapezoid can be found by evaluating the expression $\frac{1}{2} \cdot \underline{(a)}\ (\underline{(b)} + \underline{(c)})$. What is the value of (a)? What is the expression for $(b) + (c)$?





2. Triangle WCY is shown, where $m\angle Y = 90°$, $WC = 6\sqrt{2}$, $CY = 6$, and $WY = 6$. What is the area of the triangle? What is the perimeter of the triangle?



A trapezoid is shown with lengths marked on the figure. Write an expression that can be used to find the area of the trapezoid.
