Geometry Name____________________
Unit 7 Date_________________
Lesson H1 Practice Period_________

In $\triangle BKX$, $m\angle KBX = 19°$, $m\angle BXK = 41°$, and $XK = 32$. Determine the measurement of each part of $\triangle BKX$. Show your work below the table. If necessary, round to the nearest tenth.

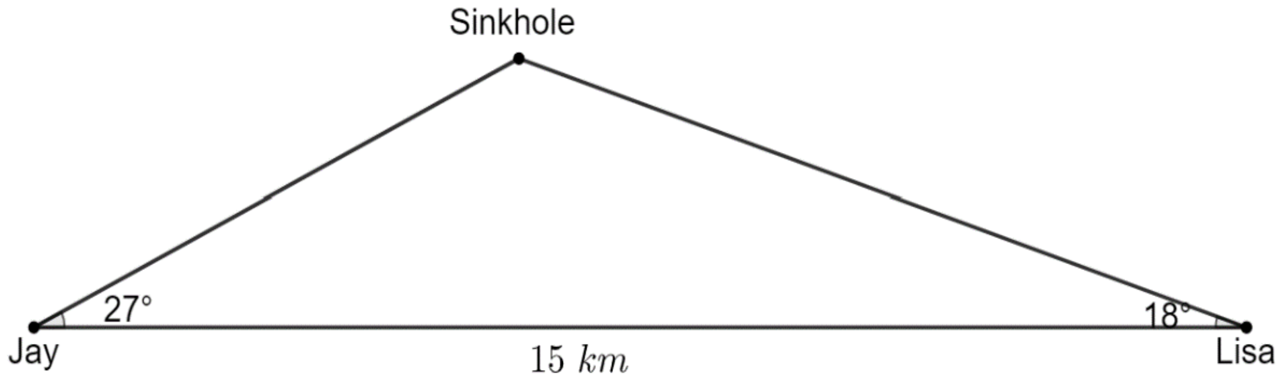
	Part	Measurement
1.	$m\angle XKB$	
2.	$\overline{XB}$	
3.	$\overline{KB}$	

In $\triangle ZFS$, $m\angle SZF = 47°$, $ZF = 28.3$ and $SF = 51.4$. Determine the measurement of each part of $\triangle ZFS$. Show your work below the table. If necessary, round to the nearest tenth.

	Part	Measurement
4.	$m\angle FSZ$	
5.	$m\angle SFZ$	
6.	$\overline{SZ}$	

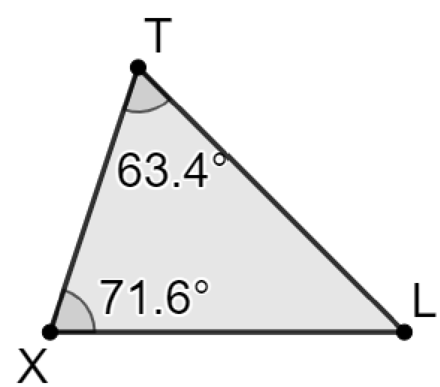
Jay and Lisa are both hiking in the Leon Sinks Geological Area. They are currently 15 kilometers (km) apart. They plan to meet up at one of the sinkholes in the park.

7. How far, to the nearest hundredth of a kilometer, does Jay hike?



8. How far, to the nearest hundredth of a kilometer, does Lisa hike?

Shanice runs in a competitive obstacle course. The obstacle course and some of its measurements are shown. The distance between point T and point X is 3.2 miles.



9. Write an equation that can be used to determine the distance, in kilometers, between point T and point L.

10. Determine the perimeter, in miles, of the obstacle course.
