Grade 6 Name______________________
Unit 3 Date______________________
Lesson 4 Practice Period_____________________

Identify which mathematical operation would be used to answer each question. Provide an explanation or sketch to support your response.

Information	**Operation**	**Explanation/Sketch**
1. In the 2020-2021 season, Florida produced 52.5 million boxes of oranges and 4.2 million boxes of grapefruits. How many times more boxes of oranges were produced than grapefruits?	$\div$	$52.5 \div 4.2$ will tell how many times more
2. Marisol bought $4\frac{3}{8}$ yards of ribbon to make necklaces and another $2\frac{1}{5}$ yards of ribbon for bracelets. How much more ribbon did Marisol buy for necklaces than for bracelets?	$-$	Subtract $4\frac{3}{8} - 2\frac{1}{5}$ to find the difference
3. The population of the United States in 2019 was 329.10 million. If the population increased by 1.94 million in 2020, what was the population in 2020?	$+$	"Increased by" tells us to add
4. Franco and Elliot are on their school's swim team. Last week, Franco swam $5\frac{7}{10}$ miles. Elliot swam $1\frac{1}{3}$ times as far as Franco. How far did Elliot swim?	$\times$	Multiply $5\frac{7}{10}$ by $1\frac{1}{3}$

For each real-world context, write a numeric expression that could be used to calculate the answer, then show your work and write your answer using the correct units.

Information	**Numeric Expression**	**Work and Answer with Correct Units**
5. In the 2020-2021 season, Florida produced 52.5 million boxes of oranges and 4.2 million boxes of grapefruits. How many times more boxes of oranges were produced than grapefruits?	$\frac{52.5}{4.2}$	12.5 $4.2 \overline{)52.5}$ -42 105 84 210 -210 0 12.5 times more oranges

6. Marisol bought $4\frac{3}{8}$ yards of ribbon to make necklaces and another $2\frac{1}{5}$ yards of ribbon for bracelets. How much more ribbon did Marisol buy for necklaces than for bracelets?	$4\frac{3}{8} - 2\frac{1}{5}$	$\frac{35}{8} - \frac{11}{5}$ $\frac{175}{40} - \frac{88}{40} = \frac{87}{40} = 2\frac{7}{40}$
7. The population of the United States in 2019 was 329.10 million. If the population increased by 1.94 million in 2020, what was the population in 2020?	$329.10 + 1.94$	$329.10 + 1.94 = 331.04$
8. Franco and Elliot are on their school's swim team. Last week, Franco swam $5\frac{7}{10}$ miles. Elliot swam $1\frac{1}{3}$ times as far as Franco. How far did Elliot swim?	$5\frac{7}{10} \cdot 1\frac{1}{3}$ or $\frac{57}{10} \cdot \frac{4}{3}$	$\frac{228}{30} = \frac{38}{5}$ or $7\frac{3}{5}$

For gardening, Hector has a large water jug that holds $5\frac{3}{4}$ quarts and a small water jug that holds $2\frac{1}{3}$ quarts.

9. Which of the questions could be answered using division?

- ○ How much more can the large water jug hold than the small water jug?
- ○ If Hector fills both jugs with water, how much water will he have?
- ○ If Hector fills the small jug with water 4 times, how much total water will that be?
- ✓ Suppose Hector uses the small jug to fill the large jug. How many times will he have to fill the small jug?

10. Using the question that you chose in number 9, write a numeric expression and answer the question. Show your work and include correct units.

$5\frac{3}{4} \div 2\frac{1}{3} = \frac{23}{4} \div \frac{7}{3} = \frac{23}{4} \cdot \frac{3}{7} = \frac{69}{28}$ or $2\frac{13}{28}$ times
