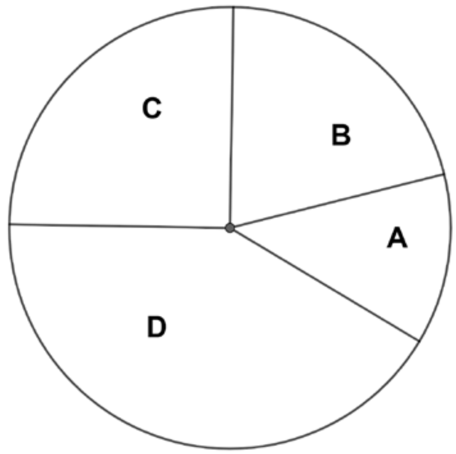
Grade 7
Unit 7
Lesson 2 Practice

Name____________________
Date____________________
Period__________________

A circle with four noncongruent sectors is shown.



Use your protractor to measure the angle of each sector. Then, complete the information. Round your answers to the nearest whole number.

1. Sector A:

   Central Angle Measure in Degrees: $45°$

   Ratio of Angle Measure to 360°: $\frac{1}{8}$ or 0.125
   Percentage of the Circle: 12.5% → 13%

2. Sector B:

   Central Angle Measure in Degrees: $75°$

   Ratio of Angle Measure to 360°: $\frac{5}{24}$ or 0.208
   Percentage of the Circle: 21%

3. Sector C:

   Central Angle Measure in Degrees: $90°$

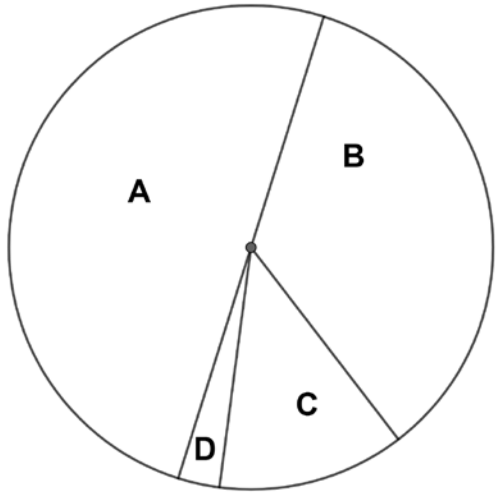
   Ratio of Angle Measure to 360°: $\frac{1}{4}$ or 0.25
   Percentage of the Circle: 25%

4. Sector D:

   Central Angle Measure in Degrees: $150°$

   Ratio of Angle Measure to 360°: $\frac{5}{12}$ or 0.417
   Percentage of the Circle: 42%

A circle with four noncongruent sectors is shown.



Use your protractor to measure the angle of each sector. Then, complete the information. Round your answers to the nearest whole number.

5. Sector A:

Central Angle Measure in Degrees: $180°$

Ratio of Angle Measure to $360°$: $\frac{1}{2}$ or 0.50

Percentage of the Circle: 50%

6. Sector B:

Central Angle Measure in Degrees: $125°$

Ratio of Angle Measure to $360°$: $\frac{25}{72}$ or 0.347

Percentage of the Circle: 35%

7. Sector C:

Central Angle Measure in Degrees: $46°$

Ratio of Angle Measure to $360°$: $\frac{23}{180}$ or $0.12\overline{7}$

Percentage of the Circle: 13%

8. Sector D:

Central Angle Measure in Degrees: $9°$

Ratio of Angle Measure to $360°$: $\frac{1}{40}$ or 0.025

Percentage of the Circle: 3%

Complete the statements. Round your answer to the nearest whole.

9. The measure of a central angle if the percentage of the circle is 68% is $\underline{244°}$.

$\frac{68}{100} = \frac{x}{360}$ $24400 = 100x$

10. The percentage of a circle if the central angle measures $47°$ is $\underline{13\%}$.

$\frac{x}{100} = \frac{47}{360}$ $4700 = 360x$
