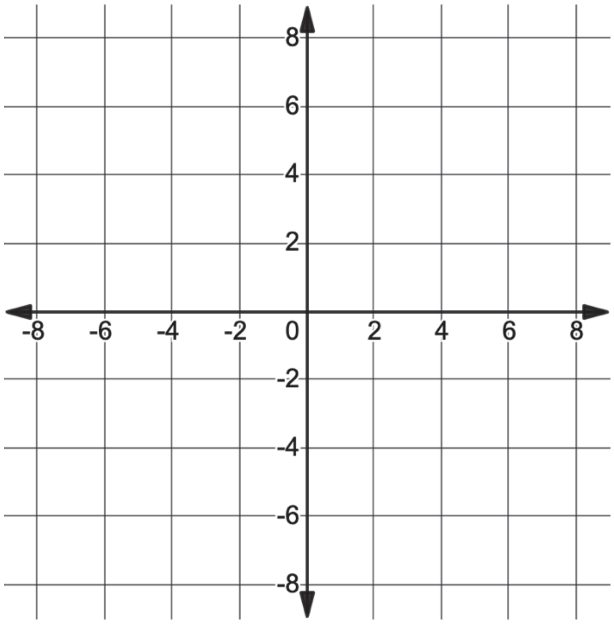
The linear inequality $6x - 3y < 18$ is written in standard form.

1. Complete the statement.

   The boundary line of this inequality is ○ dotted ○ solid because the points on the boundary line are ○ included from ○ excluded from the set.

2. Write the equation of the boundary line of this inequality in slope-intercept form.

3. Graph the boundary line on the coordinate grid.

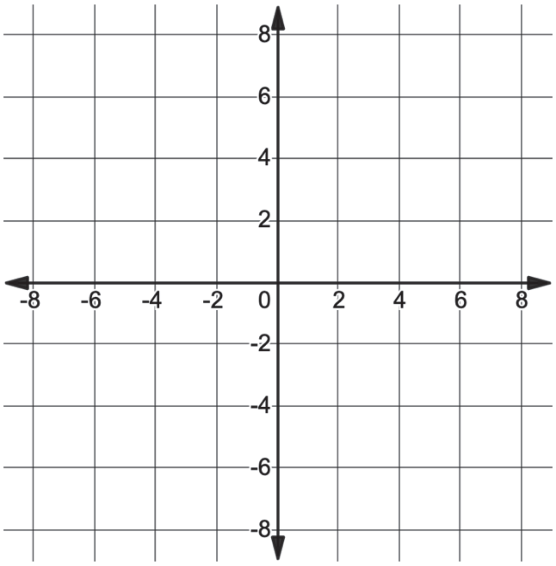


4. Explain how you will determine which side of the boundary line to shade.

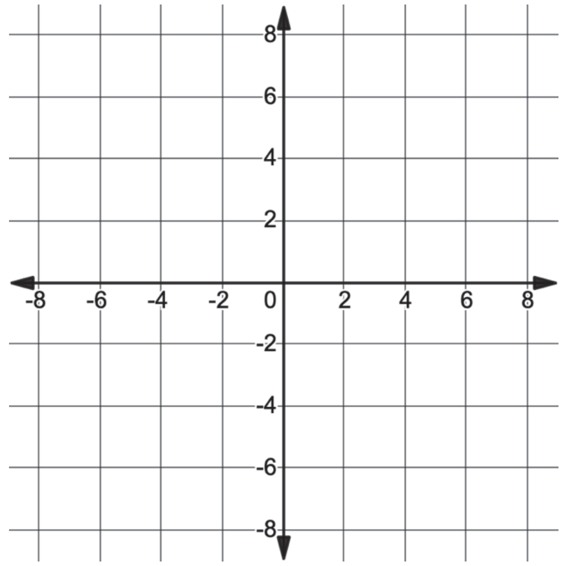
5. Shade the region on the graph that represents the solution set.

For each problem below, graph the given inequality.

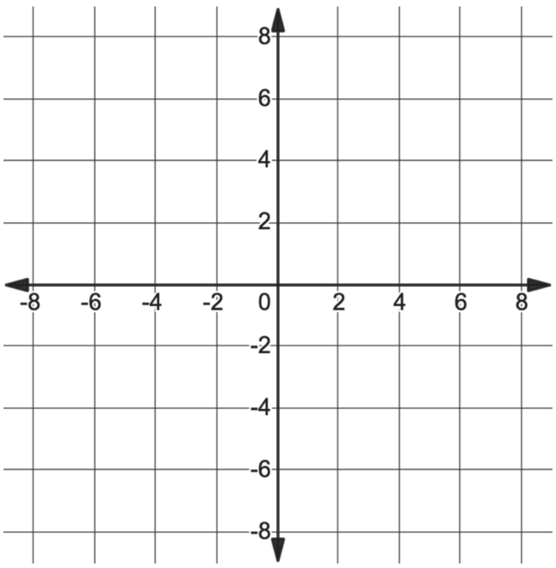
6. $y \geq \frac{2}{3}x + 4$



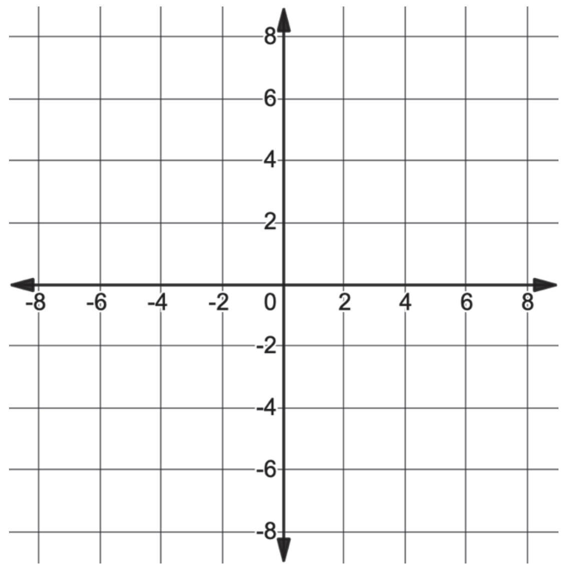
7. $y < -3x - 6$



8. $x < 6$



9. $y \geq -5$



10. $y + 2 \geq 4(x - 1)$
