Quarter 2 Summary of Instructional Units

Units are linked to the SCPS Frameworks site. Bolded benchmarks are assessed on the current quarter assessment. The benchmarks that are not in bold may be assessed in the following quarter.

Unit 4 - Area	With 10 lessons over 14 recommended instructional days, this unit covers benchmarks **MA.7.GR.1.1, MA.7.GR.1.2, MA.7.GR.1.3,** and **MA.7.GR.1.4**. In this unit, students build on their prior knowledge and skills in determining the area of quadrilaterals and composite figures. Students focus on finding the areas and perimeters of special quadrilaterals, composite figures, and polygons. Students learn how to find the circumference and area of a circle. Throughout the unit, students connect these concepts with prior knowledge through discovery of the formulas.

Unit 5 - **Scaling with Proportional Relationships**	With 10 lessons over 14 recommended instructional days, this unit covers benchmarks **MA.7.DP.1.3,** MA.7.DP.2.4**,** and **MA.7.GR.1.5**. In this unit, students will be exposed to different situations involving scaling. Using proportional thinking and scale factors, students will make predictions about populations from sample data and solve problems involving scale models. The strategies highlighted within the lessons in this unit do not include setting up proportions. This will be addressed and formalized in Unit 6 when these concepts are revisited. Teachers are encouraged to model strategies similar to those shown in this unit, as students build a stronger conceptual understanding of proportional relationships.
Unit 6 - **Solving Multi-Step Problems with Proportional Relationships**	With 11 lessons over 19 recommended instructional days, this unit covers benchmarks **MA.7.AR.3.3**, MA.7.AR.3.2, and MA.7.AR.4.5. This unit will be assessed through Lesson 6.4. The unit begins by activating students' prior knowledge of ratios with an exploration into what ratios and unit rates can tell students about converting units of measure in a variety of real-world contexts. Ratio language from Unit 5 included elements of units and comparing different forms of measurements using the concept of ratios. Lessons 1-5 (the first two sections) of Unit 6 serve as a transition from ratios to proportions. While students begin this unit building on concepts of ratios from Unit 5 in order to convert between systems and units of measure, students transition to formalizing how to set up and solve proportions to solve real-world problems outside of unit conversions starting in Lesson 6.
