Algebra 1: Unit 2, Lesson 5

1. A difference of polynomials is shown.

   $(3 - 6x^5 - 8y^4) - (-6y^4 + 5 - 8x^5)$.

   Complete the statement.

   To find the difference of the polynomials, the distributive property could be applied first. Applying this property, a resulting equivalent expression is __________________.

2. A sum of two polynomials is shown.
   $(9p^3 + 6p^2 + 3) + (-2p^2 + 5 - 7p^3)$

   Elizabeth needs to identify like terms to rewrite the expression.

   $9p^3$ and ______________ are like terms.

   $6p^2$ and ______________ are like terms.

   3 and ______________ are like terms.

3. A list of binomials is shown.

   $31a^3 - 21a^3b$, $\quad 11x^2y^3 - 5y^3x^2$, $\quad 50x^2 + 50x$, $\quad 25m^2s^3 + 35m^3s^2$

   Which expression can be rewritten as a monomial?
