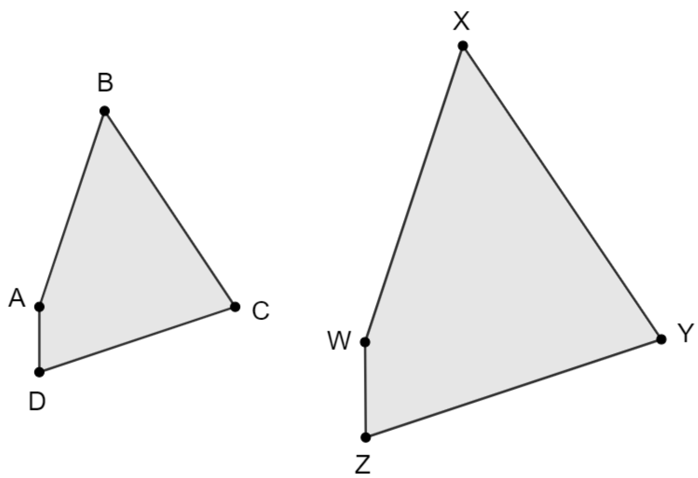
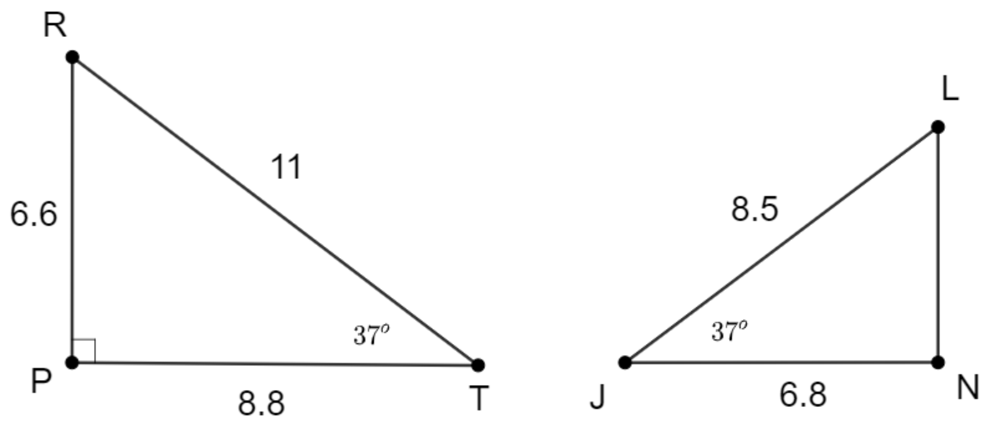
Geometry Name____________________
Unit 6 Date____________________
Lesson 10 Practice Period___________________



Fill in the table given that $ABCD \sim WXYZ$.

	Corresponding Angles	Corresponding Sides
1.	$\angle DAB \cong \angle$	$\frac{AB}{\_\_\_} = \frac{DC}{\_\_\_}$
2.	$\angle WZY \cong \angle$	$\frac{\_\_\_}{WZ} = \frac{\_\_\_}{XY}$
3.	$\angle XYZ \cong \angle$	$\frac{BC}{\_\_\_} = \frac{\_\_\_}{WX}$
4.	$\angle ABC \cong \angle$	$\frac{\_\_\_}{ZY} = \frac{AD}{\_\_\_}$

5. If $WZ = 3$, $XY = 10.5$, and $AD = 2$, determine $\overline{BC}$.



$\triangle PRT$ and $\triangle JLN$ are shown. $PR = 6.6$, $PT = 8.8$, $RT = 11$, $JL = 8.5$, $JN = 6.8$, $\overline{RP} \perp \overline{PT}$, $m\angle PTR = 37^{o}$, and $m\angle LJN = 37^{o}$.

6. What similarity theorem or postulate could be used to prove the triangles are similar?

7. Write a similarity statement for $\triangle PRT$ and $\triangle JLN$.

Complete the table.

	Angle Measures	Side Proportion or Length
8.	$m\angle PRT =$	$\frac{RT}{LJ} =$
9.	$m\angle JLN =$	$\frac{PT}{JN} =$
10.	$m\angle LNJ =$	$LN =$
