

6Ath Grade: Unit 14, Lesson 1

1. An opera house is having construction done, and can currently seat 1,125 guests. The inequality representing the total number of people that can fit is given by $1,125 \geq g$, where g represents the number of guests that can attend a show. What does this inequality mean in this context?
2. Write an inequality to represent the statement “you must be at least 60 inches tall to ride”.
3. At a local fair, anyone who wants to ride on the children’s ride must be no more than 5 feet tall. Write an inequality that represents this scenario.
