

Grade 8
Unit 1
Lesson 4 Practice

Name _____
Date _____
Period _____

For questions 1-5, evaluate each expression using the order of operations.

1. $|-5.2| + (5 \cdot 2.1)^2 + |6.75|$

2. $-2.6|(-1)^8 + 9.72|$

3. $(7.9 + (-1.5))^2 \div (-8) \times 3$

4. $(-\frac{-3-5}{2})^3 \cdot (6.2)$

5. $8\frac{3}{4} - 16.4 \div 4 - |-5.8|$

Tyler simplified the expression below and made a few errors.

$$\begin{aligned} &1\frac{1}{2} - 2(2.5^2) - |-6| \\ &1\frac{1}{2} - 2(6.25) - |-6| \\ &-0.5(6.25) - |-6| \\ &-3.125 - |-6| \\ &-3.125 + 6 \\ &2.875 \end{aligned}$$

6. Circle one of the mistakes and then explain the mistake below.

7. Circle a second mistake and then explain the mistake below.

8. Simplify the expression correctly.

9. True or False? *Always perform the order of operations from left to right.*

10. True or False? *Perform operations with exponents first when evaluating using the order of operations.*
