

Grade 8
Unit 2
Lesson 1 Practice

Name _____
Date _____
Period _____

1. Identify the first 10 perfect squares.
2. Why is 64 a perfect square, but 60 is not?

Square *A* is smaller than Square *B*. Square *B* is smaller than Square *C*.

The three squares' side lengths are $2\frac{3}{5}$ inches, 5 inches, and 7.7 inches. Complete the equation for each of the squares shown.

3. Square *A* Area = (_____) ² or Area = _____ × _____ = _____ in²

4. Square *B* Area = (_____) ² or Area = _____ × _____ = _____ in²

5. Square *C* Area = (_____) ² or Area = _____ × _____ = _____ in²

Find the length of a side of a square for each area given.

6. $\frac{100}{9}$ square meters

7. 2.25 square units

8. 144 square inches

The graph represents the equation $y = x^2$.

9. Complete the table of values to find corresponding y -values. Then plot the point on the graph.

x	Substitute into $y = x^2$	Coordinates (x, y)
$-1\frac{3}{5}$		
-0.4		
0		
1.2		
2		

10. Will the graph of $y = x^2$ ever go below the x -axis? Explain why or why not.
