

Use the graph for questions 1–2

On the graph label the line segment, c .

1. Create a right triangle with hypotenuse c by sketching horizontal and vertical legs. Label the legs of the right triangle a and b .
2. Use the Pythagorean Theorem to find the approximate length of c . Round to the nearest tenth.

Use the coordinate grid below for questions 3–5.

3. Plot and connect the points $(4, -1)$ and $(-5, 6)$ on the grid.
4. Create a right triangle by drawing vertical and horizontal line segments on the grid.
5. Apply the Pythagorean Theorem to the exact distance between the points.

6. Find the exact distance between the points.

Use the graph below of points A , B , and C for questions 7–10.

7. Find the length of $\overline{AB}$.

8. Find exact length of $\overline{AC}$.

9. Find exact length of $\overline{BC}$.

10. Use the Converse of the Pythagorean Theorem to determine if Triangle ABC is a right triangle.
