

Grade 8
Unit 7
Lesson 6 Practice

Name _____
Date _____
Period _____

The graph represents the total in Kayla's savings account, y , over the amount of time, x , in months. Use the graph to answer questions 1–7.

1. What is the slope of the line?
2. What is the y -intercept of the line?

Use the graph to match each key feature with its interpretation.

Key Feature	Interpretation
3. x -intercept	A. Kayla withdraws \$25 per month from her account.
4. y -intercept	B. Kayla started with \$250 in her account.
5. Slope	C. After 10 months Kayla's account is empty.
6. sign of the slope	D. Kayla's savings account is decreasing.

7. Explain why the x -intercept does or does not make sense in this context.

Determine the slope and y -intercept of each graph and interpret their meaning:

Graph	Slope and Interpretation	y -intercept and Interpretation
8. Sam is trying to save money to buy a new phone. The graph represents the relationship between the amount saved, S, and the number of weeks, w.  The graph shows a linear relationship between the number of weeks w (x-axis) and the amount saved S (y-axis). The x-axis ranges from 0 to 5 with major grid lines every 1 unit. The y-axis ranges from 0 to 400 with major grid lines every 100 units. The line starts at the origin $(0, 0)$ and passes through the point $(5, 400)$.		
9. Trae and his friends are sharing a family size bag of chips. The amount left in the chip bag, C, in ounces is represented in the graph, with number of servings eaten, s.  The graph shows a linear relationship between the number of servings eaten s (x-axis) and the amount left in the chip bag C (y-axis). The x-axis ranges from 0 to 10 with major grid lines every 1 unit. The y-axis ranges from 0 to 25 with major grid lines every 5 units. The line starts at the y-intercept $(0, 25)$ and passes through the point $(10, 12.5)$.		
10. The graph represents the relationship between the total cost of an electrician visit to your home, T, and number of hours he worked, h.  The graph shows a linear relationship between the number of hours worked h (x-axis) and the total cost T (y-axis). The x-axis ranges from 0 to 5 with major grid lines every 1 unit. The y-axis ranges from 0 to 550 with major grid lines every 50 units. The line starts at the y-intercept $(0, 50)$ and passes through the point $(5, 550)$.
