

Angela is using shapes to create a design on her wall. She experiments with different movements by sliding, flipping, and spinning the shape. For each movement shown in the table, identify the description of the movement Angela used.

Movement		Description
1.		☐ slide ☐ flip ☐ spin
2.		☐ slide ☐ flip ☐ spin
3.		☐ slide ☐ flip ☐ spin

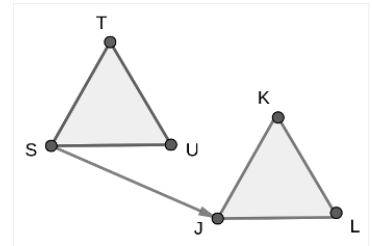

4. When a slide, flip, or spin is performed on a figure as in the one above, the corresponding side lengths of the preimage and image are the same length, and the angle measures are the same measure. Therefore, the preimage and image are

☐ congruent

☐ similar

 figures.

$\triangle STU$ is slid to create $\triangle JKL$. Use the image of $\triangle STU$ and $\triangle JKL$ to complete the statements in problems 5, 6, and 7.

5. Point S on the
☐ image
☐ preimage corresponds to
☐ Point J
☐ Point K
☐ Point L on the
☐ image.
☐ preimage.
6. Point T on the
☐ image
☐ preimage corresponds to
☐ Point J
☐ Point K
☐ Point L on the
☐ image.
☐ preimage.
7. Point U on the
☐ image
☐ preimage corresponds to
☐ Point J
☐ Point K
☐ Point L on the
☐ image.
☐ preimage.

$\triangle ABC$ is flipped over segment DE to create $\triangle GFC$. Use the image below of $\triangle ABC$ and $\triangle GFC$ to complete the statements in problems 8, 9, and 10.

8. Segment AB on the
☐ image
☐ preimage corresponds to
☐ segment CF
☐ segment GF
☐ segment GC on the
☐ image.
☐ preimage.
9. Segment BC on the
☐ image
☐ preimage corresponds to
☐ segment FC
☐ segment GF
☐ segment CG on the
☐ image.
☐ preimage.
10. Segment CA on the
☐ image
☐ preimage corresponds to
☐ segment CF
☐ segment FG
☐ segment CG on the
☐ image.
☐ preimage.
