

On the coordinate plane shown, $\triangle XYZ$ is reflected to create $\triangle X'Y'Z'$.

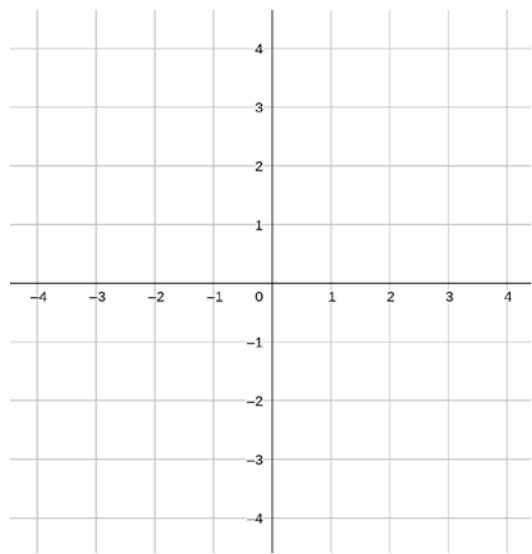

1. What is the line of reflection?

Using the coordinate plane in question 1, complete the table with the coordinates of each vertex.

Coordinates		Coordinates	
2. Point X		Point X'	
3. Point Y		Point Y'	
4. Point Z		Point Z'	

5. Describe the relationship between the coordinates of the preimage and the image.

6. The vertices of $\triangle ABC$ have their coordinates given in the below table. Plot ABC on the coordinate grid.

Reflect $\triangle ABC$ over the y -axis. Label the image $\triangle A'B'C'$ and complete the table for the image.

Coordinates		Coordinates	
7. Point A	$(-3, 1)$	Point A'	
8. Point B	$(-1, 2)$	Point B'	
9. Point C	$(-2, -2)$	Point C'	

10. The distance from point A to the y -axis and the distance from point A' to the y -axis are
- ☐ the same.

☐ not the same.
