

1. Express the given mapped relation as a table and a graph.

Input	Output
-5	4.25
1	-3
$4\frac{1}{4}$	0

Use the relation graphed below to complete questions 2-4.

2. Complete the input-output table for the graph.
3. Does -4 represent an input or an output value in the relation?
4. Create a mapping diagram of the relation.

Input	Output
-4	4
-4	-2
-1	4
2	-2

Input

Use the table to complete questions 5-7.

5. Complete the input-output table for the rule "input times 3 minus 2".

Input	Output
-5	-17
0	-2
2	4
5	13

6. How many input-output pairs are indicated by the table of values?

Four

7. Create a mapping diagram of the input-output table.

Use the table to complete questions 8-10.

Input	Output
-2	-5
0	-5
2	3
4	6
6	13

8. Write the set of ordered pairs that represents the relation.
 $\{(-2, -5), (0, -5), (2, 3), (4, 6), (6, 13)\}$
9. Make a list of all the independent variable values from the relation above.
-2, 0, 2, 4, 6
10. Which numbers would represent the x -values from the relation above?
Input -2, 0, 2, 4, 6
