Choose two relations to use to complete the statements.

9. Relation _____ is an example of a function because...

Answers will vary.

Relations 2, 4, 6, and 7 are possible answers because:

- for each input, there is only one output,
- the graph passes the vertical line test, and/or
- for each x -value there is only one y value.

10. Relation _____ is not an example of a function because...

Answers will vary

Relations 1, 3, 5, and 8 are possible answers because:

- for each input, there is more than one output,
- the graph does not pass the vertical line test, and/or
- for each x -value there is more than one y value.
