

Use the two graphs to complete questions 1–5:

1. Complete the table by writing the letter of the graph that matches each description, then label the independent and dependent variables.

Description	Graph	Independent Variable	Dependent Variable
The temperature from noon to 6:00PM.			
The temperature from 3:00AM to 9:00AM.			

2. Complete the statement.

Graph

o A

o B

 shows the function

o decreasing

o increasing

o remaining constant

 then

o decreasing

o increasing

o remaining constant

 over the interval shown to model how the

o number of hours

o temperature

o number of hours.

o temperature.

3. Create an additional scenario that would be modeled by Graph A.

4. Create an additional scenario that would be modeled by Graph B.

Use the three graphs to complete questions 5–10:

5. What would be the appropriate label for the y -axis?
6. Which graph could represent the path of Jose as he walks quickly from his friend's house to his own home?
7. Which graph has a constant interval?
8. Which graph shows a function that is decreasing?
9. Write a story involving Jose that could be depicted by Graph C.
10. You overhear a classmate state that if time is the independent variable and distance from home is the dependent variable, then in Graph A, Jose goes up a hill walks across the mountain and comes down the other side. Explain to your friend the mistake in their reasoning.
