

Use the graph to answer problems 1–7:

Luka was biking the East Central Regional Rail Trail in Edgewater, Florida. This graph shows his distance away from his car.

- What is the domain of Luka's bike ride?
 $0 \leq x \leq 8$
- What is the range of Luka's bike ride?
 $0 \leq y \leq 35$
- Between which times was Luka going the fastest?
 $0 \leq x \leq 1$
- Between which times was Luka riding away from his car?
 $0 \leq x \leq 3$
- Between which times was Luka riding back toward his car?
 $4 \leq x \leq 8$
- If Luka started riding at 9:00 AM, what time did he stop for lunch?
Noon
- How far was Luka's total bike ride?
70 miles

Use the graph to answer problems 8–10:

Kadeer is riding on a roller coaster that has a loop. He was asked to draw a graph depicting his distance from the ground (in feet) in respect to the time (in seconds) that he was on the ride.

8. What is the range of Kadeer's graph? Is it realistic?
 $0 \leq y \leq 200$
Answers will vary. The range is realistic, however the graph is not. Kadeer's graph is not a function of distance over time. The graph should not have more than one output for any x value.
9. Based on the graph how long was Kadeer on the roller coaster?
5 seconds
10. Kadeer's graph does not represent a function. On the graph provided draw a more realistic graph for the situation.

Answers will vary, but should represent:

- Hit 200 ft. at 2.5 sec.
- Back at 0 ft. at 5 sec.
