

The scatter plot shows the relationship between the temperature in degrees Celsius and specific humidity in grams per kilograms (g/kg).

The data is shown, fit with three different lines.

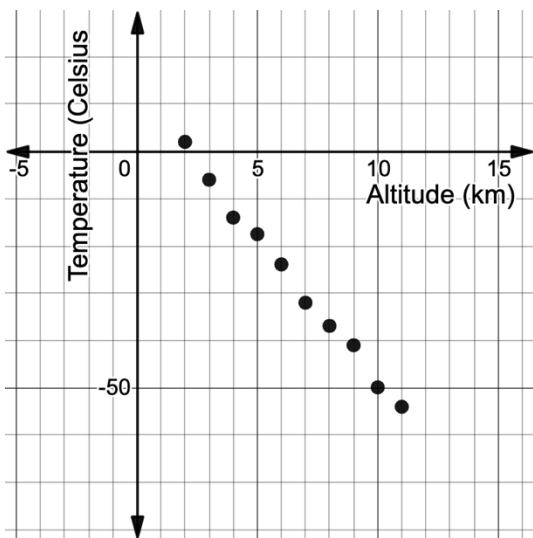

1. Which graph has the most points above the line?
2. Which graph has the most points below the line?
3. Which graph has an equal number of points above and below the line?

4. Explain which graph has the most accurate line of fit.

5. The point $(-10, 2)$ is on the line. Interpret this point in context.

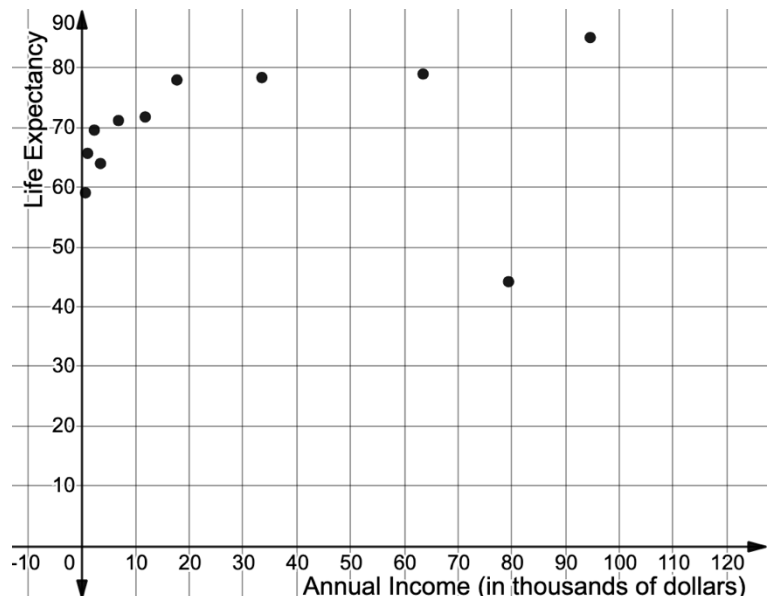

The set of data shows the relationship between altitude in kilometers (km) and the temperature in degrees Celsius.

6. Use a straightedge to draw a line that models the relationship between the variables.

7. Describe the patterns of association.

The set of data shows the relationship between a person's annual income in thousands of dollars and their life expectancy.

8. Use a straightedge to draw a line that models the relationship between the variables.

9. Describe the patterns of association.

10. Explain what any outliers represent on this graph.
