

Grade 8
Unit 11
Lesson 6 Practice

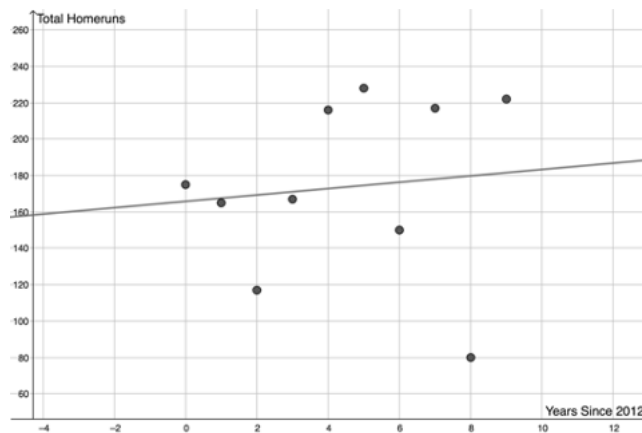

Name Answer Key
Date _____
Period _____

The scatter plot shows the total amount of homeruns made by the Tampa Bay Rays in regular seasons from 2012 to 2021.

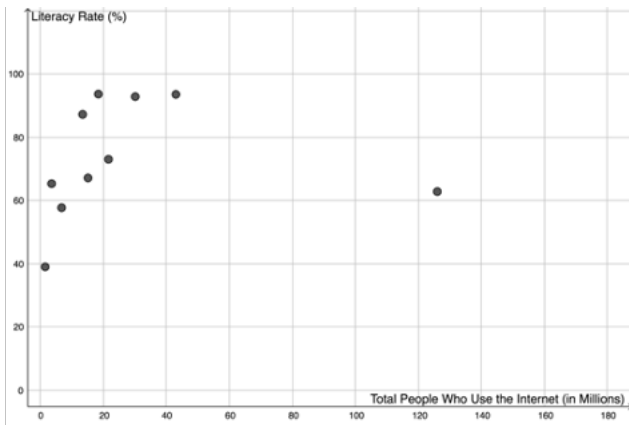

1. The point (4,216) is on the scatter plot. Interpret the meaning of this point in context.
In 2016 the Tampa Bay Rays hit 216 Homeruns.
2. Describe the association between the years since 2012 and the total home runs made.
Weak, positive association between the years since 2012 and total homeruns.

Suppose the line shown is fit to the data. The equation of the line of fit is $y = 1.8x + 165.8$.

3. How does the slope of the line of fit relate to the associations from question 2?
Slope is positive but not steep $\Rightarrow$ positive weak association
4. Interpret the meaning of the slope in context.
The number of homeruns increases by an average of 1.8 for each year since 2012.
5. Explain whether the y -intercept of the line makes sense in this context.
The y -intercept does not make sense because in 2012, the Tampa Bay Rays had ≈ 175 homeruns, not 165.8 (also decimal does not make sense in this context).

The scatter plot shows the relationship between the total number of people who use the internet in a region, in millions, and that same region's percentage of literacy rate.

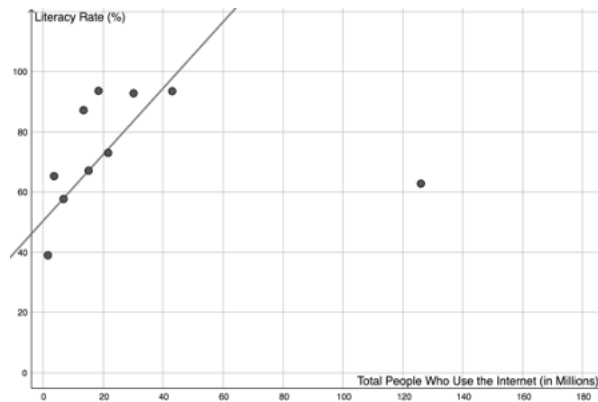

6. The point (1.51, 39) is on the scatter plot. Interpret the meaning of this point in context.

A region that has 1.51 million internet users has 39% literacy rate.

7. Describe the association between the total number of people using the internet in a region and that region's literacy rate.

Positive association

Suppose the line shown is fit to the data. The equation of the line of fit is $y = 1.1x + 50.5$.

8. How does the slope of the line of fit relate to the associations from question 7?

The slope is positive $\Rightarrow$ positive association

9. Interpret the meaning of the slope in context.

The literacy rate of a region increases by an average of 1.1% for each additional 1 million people who use the internet.

10. Explain whether the y-intercept of the line makes sense in this context.

Answers will vary. No because it does not make sense for a first world region to have 0 internet users.
