

Grade 8
Unit 12
Lesson 6 Practice

Name _____
Date _____
Period _____

For questions 1-3, consider the expression $18w^4m^2 - 27w^5m$.

1. What is the greatest common factor (GCF) of the two terms in the expression?
2. Rewrite $18w^4m^2 - 27w^5m$ using the GCF as one of the factors.
3. Verify using the distributive property that the expression you determined in question 2 is equivalent to the original expression.

For questions 4-7, consider the expression $10a^2b^7 - 30a^5b^4$.

4. What is the greatest common factor (GCF) of the two terms in the expression?
5. Rewrite $10a^2b^7 - 30a^5b^4$ using the GCF as one of the factors.
6. Write an equivalent expression to $10a^2b^7 - 30a^5b^4$ that does not use the GCF as one of the factors.
7. Verify using the distributive property that the expressions you determined in questions 5 and 6 are equivalent to the original expression.

For questions 8-10, rewrite each expression using the GCF as one of the factors.

8. $-h^7s^3 - 4h^5s^5$

9. $-5r^4p^7 + 25r^2p^3$

10. $4f^3g^6 - 18fg$
