

Grade 8
Unit 12
Lesson 7 Practice

Name _____
Date _____
Period _____

1. Find the value of the expression $\frac{7.2 + \sqrt[3]{w}}{20}$, where $w = -125$.

2. Find the value of the expression $\frac{\sqrt{81-x^2}}{4} + 19$, where $x = 5$.

3. Find the value of the expression $\sqrt{a^2 - 144}$, where $a = -13$.

4. Find the value of the expression $\frac{7 \cdot y^3}{-\sqrt{64}}$, where $y = -2$.

For questions 5-10, find the value of each expression.

$$5. \quad \left| 10^{-1} - \sqrt[3]{\frac{1}{125}} \right|$$

$$6. \quad \frac{30 - 4 \cdot \sqrt{121}}{3^2}$$

$$7. \quad \frac{2 \cdot 3^3}{-\sqrt{36}}$$

$$8. \quad \left(\frac{1}{4}\right)^{-2} + \sqrt{5^2 - 4^2}$$

$$9. \quad \frac{10.5 + \sqrt{225}}{30}$$

$$10. \quad \left| \left(\frac{1}{2}\right)^{-2} + \sqrt[3]{\frac{1}{27}} \right|$$
