

8th Grade Unit 13 Assessment Guide

General Information	Unit 13 is students' introduction to different types of angles. The benchmarks in this unit serve as a foundation for Geometry. This unit also gives students opportunities to solve equations. As this unit is at the end of the year, it would be helpful for teachers to consider if students who have previously struggled with solving equations continue to struggle. The assessment does allow students to use a calculator so that the teacher can more easily determine what types of equations students are struggling with. Each benchmark has questions that require the use of equations and questions that require the student to show knowledge of the angle relationships. Teachers are encouraged to monitor whether students understand the relationships but struggle with the algebra or vice versa. Discerning between the two could help teachers pinpoint the students who need further instruction in the benchmarks of this unit as opposed to students who need further instruction with solving equations.
Calculator Information	The questions on the unit assessment are calculator.
