

Grade 8
Unit 14
Lesson 3 Practice

Name Answer Key
Date _____
Period _____

Jax places 4 red marbles, 4 blue marbles, and 4 green marbles in a bag. A representation of the marbles is shown.

1. What are the possible outcomes of randomly choosing one marble?

Red Marble $\frac{4}{12}$ or $\frac{1}{3}$ 3 possible outcomes

Blue Marble $\frac{4}{12}$ or $\frac{1}{3}$

Green Marble $\frac{4}{12}$ or $\frac{1}{3}$

2. How many outcomes are in the sample space when choosing two marbles, with replacement?

9 outcomes

3. Write the sample space for choosing two marbles from the bag, with replacement.

{RR, RB, RG, BR, BB, BG, GR, GB, GG}

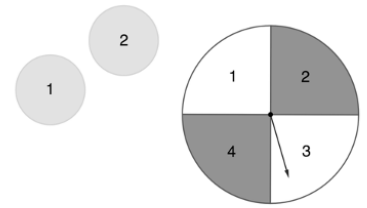

4. Let Event A = two marbles of different colors are chosen. How many outcomes are in Event A?

$\frac{6}{9}$ outcomes

5. What is the probability of choosing two marbles of different colors, P(A)?

$P(A) = \frac{2}{3}$

A fair spinner and a fair coin with one side labeled “1” and one side labeled “2” side is shown.

6. If the coin is tossed and the spinner is spun, how many outcomes are in the sample space?

8

7. Write the sample space.

$\{11, 12, 13, 14, 21, 22, 23, 24\}$

8. What is the probability that both land on 1?

$\frac{1}{8}$

9. If the coin is tossed five times, how many outcomes are in the sample space?

$2^5 = 32$

10. What is the probability that it lands on 2 all five times?

$\frac{1}{32}$
