

6Ath Grade: Unit 11, Lesson 4

1. Is this a correct equivalence?

$$\left(\frac{29}{17}\right) \div \left(\frac{5}{17}\right) = \frac{(5 \div 29)}{1}$$

2. What is the result of this equation?

$$\frac{31.746}{3.9} \times \frac{10}{10} =$$

3. Is this a valid progression of a problem?

$$6\frac{1}{2} \div 1\frac{1}{3} = \frac{8}{2} \times \frac{4}{3}$$
