

Grade 6 Accelerated
Unit 11
Lesson 5 Practice

Name Answer Key
Date _____
Period _____

Use the table below to answer questions 1-3

The table shows transactions for 3 different checking accounts. A negative number represents a debit and a positive number represents a credit.

Account 1	Account 2	Account 3
\$478.92	\$563.25	\$533.30
-\$17.29	-\$62.15	-\$312.55
-\$22.50	\$122.40	\$99.13
\$116.34	-\$49.70	-\$27.15

1. What is the ending balance of Account 1?

$$478.92 - 17.29 - 22.50 + 116.34 = \$555.47$$

2. What is the ending balance of Account 2?

$$563.25 - 62.15 + 122.40 - 49.70 = \$573.80$$

3. What is the ending balance of Account 3?

$$533.30 - 312.55 + 99.13 - 27.15 = \$292.73$$

Use the information below to answer questions 4-5.

Franklin recently went on a weekend hiking trip and recorded the elevation changes at several checkpoints. Franklin's elevation log can be seen in the table below.

Checkpoint	Beginning Elevation (ft)	Final Elevation (ft)
1	153.6	220.8
2	220.8	112.4
3	112.4	88.2
4	88.2	-56.3

Final – Beginning

67.2
-108.4
-24.2
-144.5

4. Which checkpoint has the greatest change in elevation?

Checkpoint 4

5. If the next checkpoint has a final elevation at -87.1, what is the change in elevation?

$$-87.1 - (-56.3) = -30.8 \text{ ft.}$$

6. Jamey purchased a new boat for \$61,014.00. She read that the value of new boats change by $\frac{-2}{19}$ in the first year. What is the value of Jamey's boat after the first year?

$$61,014 \left(\frac{-2}{19} \right) = -6,422.53$$

$$\begin{array}{r} 61014.00 \\ - 6422.53 \\ \hline \$54,591.47 \end{array}$$

7. Jamey learns that the value of her boat will continue to change by $\frac{-3}{10}$ of its value each year after the first year. Using the value after year one from Question 6, what is the value of Jamey's boat at the end of year 2?

$$54,591.47 \left(\frac{-3}{10} \right) = -16,377.44$$

$$\begin{array}{r} 54591.47 \\ - 16377.44 \\ \hline \$38,214.03 \end{array}$$

8. An Orca whale is swimming $-176\frac{1}{4}$ ft below sea level when he notices the rest of his pod above him at the surface. Orca whales can swim at a rate of 120.52 feet per hour. How long, in hours, will it take the Orca to reach his pod?

$$\frac{176.25}{120.52} \approx 1.46 \quad \text{Approximatley 1.46 hours}$$

9. A candle store sells the 3-wick candles for $2\frac{1}{5}$ times what they paid for them from the warehouse. The candles are purchased from the warehouse at \$5.65. How much profit does the candle store make off each candle?

$$2.2(5.65) = 12.43$$

$$\begin{array}{r} 12.43 \\ - 5.65 \\ \hline \$6.78 \end{array}$$

10. After 3 months, the price of the candles is reduced by $\frac{1}{5}$ of the original store price. Using the sale price from Question 9, what is the price of the candles after the 3 month reduction?

$$12.43(0.2) = 2.49$$

$$\begin{array}{r} 12.43 \\ - 2.49 \\ \hline \$9.94 \end{array}$$
