

6Ath Grade: Unit 11, Lesson 6

1. Stephon goes to the supermarket with \$75. After making his purchases, Stephon only spent $\frac{2}{5}$ of that amount. What is the expression that will help us know how much money he spent at the supermarket.
2. Delaney is making a muffin recipe that calls for $2\frac{3}{4}$ cups of sugar. Suppose Delaney only wants to make $\frac{2}{3}$ of the recipe, what expression could be written to solve for the amount of sugar she will now need?
3. Ramon transports flowers for Rolling Rosie's Garden Center. On his last job, Ramon made \$0.31 for every mile he drove. He earned a total of \$389.36. Set up a fraction to determine how many miles Ramon drove.

4. Eugene is walking the street looking for a clothing store to buy new flip-flops. He walks 65.5 yards west and 44.1 yards north. However, he somehow missed the store and had to walk 11.8 yards south. What is the expression that represents the total distance walked by Eugene.
5. Diego ran $5\frac{1}{2}$ miles and then walked $\frac{9}{10}$ around a 4 mile track. Write an expression that represents how far Diego ran and walked.
6. Aubrey was writing a story about Dash the Pug. Dash finds himself getting into mischievous situations for 4 chapters of the 7 chapter book. If he spends about $\frac{1}{2}$ of the chapter working through these situations, how much of the book is Dash working through mischief?
