

6Ath Grade: Unit 11, Lesson 7

1. Marie participates in a triathlon. She must swim $\frac{4}{5}$ mile, bike $22\frac{1}{2}$ miles, and then run $12\frac{9}{10}$ miles. Write an expression that represents how long the triathlon is in miles.
2. A father distributes all of a work bonus to his children. He gives the eldest son $\frac{6}{11}$ of the bonus, the middle son $\frac{1}{5}$, and the youngest son the rest. Is the statement “The middle son will only receive a quarter of the bonus” correct?
3. In a language institute there are 3,150 students, of them, 1,150 study Spanish. From the amount left, 800 study French and 900 study Chinese. What expression represents the number of students in the class that are not studying Spanish?
