

6th Grade Unit 1 Assessment Guide

General Information	This assessment can be used by the teacher as a short diagnostic to determine whether a student recalls some the prerequisite benchmarks from grade 5 or it can be used after a class completes unit 1. The teacher is encouraged to remember that the questions on this assessment cannot give a complete picture, but they can serve as general information. Just because a student misses a question on this assessment does not mean that the student has a learning gap. Teachers should look at their students as a collective to determine if there are any noticeable gaps that may take some remediation. Often remediation is best done within the grade-level learning as students continue to learn new content. Halting all grade-level learning to reteach content from earlier grades may not be the best form of remediation. This introductory unit and assessment can be used as a tool to help students receive support while continuing their learning of challenging mathematics content. If this assessment is used as a diagnostic, then the content from unit 1 may be a tool for the teacher to use to supplement student learning to help remediate. Teachers may also use instructional tasks from the grade 5 Big M for the prerequisite benchmarks.
Calculator Information	The assessment is no calculator.
Total Recommended Points	The total recommended points in this guide is 100 points.

Question	1a	Benchmark(s)	MA.5.AR.1.2
--	--	--	--

height 452$\frac{31}{50}$ m		Recommended Scoring (8 Total Points)	Consider giving partial credit based on student work.
Question	1b	Benchmark(s)	MA.5.AR.1.2
height 47$\frac{27}{100}$ m		Recommended Scoring (8 Total Points)	Consider 4 points for finding the sum of $89\frac{23}{25}$ and $62\frac{1}{2}$ and 4 points for finding the difference between $152\frac{21}{50}$ and $105\frac{3}{20}$.
Question	2	Benchmark(s)	MA.5.AR.1.2
cups 6$\frac{3}{4}$		Recommended Scoring (8 Total Points)	Consider giving partial credit based on student work. Students do not need to report the answer as a mixed number. Equivalent answers in different forms are also correct.

Question	3a	Benchmark(s)	MA.5.GR.4.2
		Recommended Scoring (12 Total Points)	Consider giving students 4 points for each correctly plotted point.
Question	3b	Benchmark(s)	MA.5.AR.3.1
equation $y = 10x$		Recommended Scoring (8 Total Points)	No partial credit is suggested.
Question	4a	Benchmark(s)	MA.5.GR.2.1
perimeter 49 ft		Recommended Scoring (8 Total Points)	Consider giving partial credit based on student work.

Question		4b	Benchmark(s)	MA.5.GR.2.1
area 113.46 ft²			Recommended Scoring (8 Total Points)	Consider giving partial credit based on student work.
Question		5	Benchmark(s)	MA.5.NSO.2.2
78 $\frac{68}{72}$			Recommended Scoring (10 Total Points)	Consider giving partial credit based on student work.
Question		6	Benchmark(s)	MA.5.AR.1.2 *without RW context
$\frac{378}{10}$			Recommended Scoring (10 Total Points)	Students may provide an equivalent answer. There should be no expectation of “reducing to lowest terms” or simplifying the answer. Consider giving partial credit based on student work.

Question	7	Benchmark(s)	MA.5.AR.1.2 *without RW context
	$\frac{1}{4}$	Recommended Scoring (10 Total Points)	Students may provide an equivalent answer. There should be no expectation of “reducing to lowest terms” or simplifying the answer. Consider giving partial credit based on student work.
Question	8	Benchmark(s)	MA.5.AR.1.3
	$\frac{1}{160}$	Recommended Scoring (10 Total Points)	Students may provide an equivalent answer. There should be no expectation of “reducing to lowest terms” or simplifying the answer. Consider giving partial credit based on student work.
