

Grade 6
Unit 1
Lesson 3 Practice

Name Answer Key
Date _____
Period _____

- Sasha mixes $\frac{3}{4}$ cup of sugar with a pitcher of tea to make sweet tea. How much sugar does Sasha use if she makes 9 pitchers of tea?
 $\frac{3}{4} \cdot \frac{9}{1} = \frac{27}{4} = 6\frac{3}{4}$
- Dean knows he needs $3\frac{2}{5}$ cups of peanut butter to make a batch of 24 peanut butter cookies. He wants to make $7\frac{1}{4}$ batches to sell at the local farmers market. How many cups of peanut butter does Dean need to make the cookies for the farmers market?
 $3\frac{2}{5} \times 7\frac{1}{4} \rightarrow \frac{17}{5} \times \frac{29}{4} = \frac{493}{20} = 24\frac{13}{20}$ cups of peanut butter

Use the given context to answer questions 3-5.

Padgett's mom gave him the recipe for her award-winning cheesecake. The ingredients for one cheesecake are shown.

Award-Winning Cheesecake			
$2\frac{3}{4}$ cup cream cheese softened	$1\frac{1}{4}$ cup marshmallow fluff	$2\frac{1}{4}$ tablespoons all-purpose flour	$\frac{1}{4}$ teaspoon vanilla extract
$\frac{1}{4}$ teaspoon lemon juice	2 eggs	1 graham cracker crust	

Padgett wants to make 8 cheesecakes to share with his family and friends.

- Write an expression that can be used to determine how much cream cheese Padgett will need.
 $2\frac{3}{4} \times 8$
- How many cups of marshmallow fluff will Padgett need?
 $1\frac{1}{4} \times 8 \rightarrow \frac{5}{4} \times \frac{8}{1} = \frac{40}{4} = 10$
- How many teaspoons of lemon juice will Padgett need?
 $\frac{1}{4} \times 8 \rightarrow \frac{1}{4} \times \frac{8}{1} = \frac{8}{4} = 2$

For questions 6-8, find the given product.

$$6. \quad \frac{5}{12} \times \frac{4}{9} = \frac{20}{108} \div 4 = \frac{5}{27}$$

$$7. \quad 4 \times \frac{7}{8} = \frac{4}{1} \times \frac{7}{8} = \frac{28}{8} = 3\frac{4}{8} = 3\frac{1}{2}$$

$$8. \quad 3\frac{7}{10} \times \frac{6}{7} = \frac{37}{10} \times \frac{6}{7} = \frac{222}{70} = 3\frac{12}{70} = 3\frac{6}{35}$$

For questions 9 – 10, complete the area model to find the given product.

$$9. \quad 2\frac{5}{6} \cdot 5\frac{1}{9} =$$

	5	$\frac{1}{9}$
2	10	$\frac{2}{9}$
$\frac{5}{6}$	$\frac{25}{6}$	$\frac{5}{54}$

$$10 + \frac{2}{9} + \frac{25}{6} + \frac{5}{54}$$

$$10 + \frac{12}{54} + \frac{225}{54} + \frac{5}{54}$$

$$10 + \frac{242}{54} = 10 + 4\frac{26}{54}$$

$$= 14\frac{26}{54}$$

$$= 14\frac{13}{27}$$

$$10. \quad 3\frac{7}{9} \cdot 7\frac{1}{3} =$$

	7	$\frac{1}{3}$
3	21	$\frac{3}{3}$
$\frac{7}{9}$	$\frac{49}{9}$	$\frac{7}{27}$

$$21 + \frac{49}{9} + \frac{3}{3} + \frac{7}{27}$$

$$21 + \frac{49}{9} + 1 + \frac{7}{27}$$

$$21 + 1 + \frac{147}{27} + \frac{7}{27}$$

$$22 + \frac{154}{27}$$

$$27\frac{19}{27}$$
