

Use the following context to answer questions 1-3.

Ezra delivered 5 gallons of coffee to his local high school for teacher appreciation week. Each cup of coffee is approximately $\frac{1}{7}$ of a gallon.

1. Write the division expression that represents how many cups of coffee Ezra delivered to the high school.
2. Draw a model that represents the division expression.
3. How many cups of coffee did Ezra deliver to the high school?

For questions 4-7, find the given quotient.

4. $\frac{5}{9} \div \frac{1}{3}$

5. $\frac{1}{8} \div \frac{3}{4}$

6. $7 \div \frac{1}{9}$

7. $\frac{4}{9} \div 5$

Use the given context to answer questions 8-10.

An ice cream shop in Gainesville, Florida has $\frac{3}{5}$ of a gallon of cookies and cream ice cream left. Benjamin and his study group wanted ice cream after a long day of studying. All 7 friends ordered cookies and cream ice cream, causing the ice cream shop to run out.

8. Write the division expression that represents the context.

9. Draw a model that represents the division expression.

10. How much ice cream did each person get?
