

Grade 6
Unit 1
Lesson 5 Practice

Name_____Answer Key_____
Date_____
Period_____

Use the following context to answer questions 1 – 4.

The Tabb family enjoys taking hiking trips across the United States. A list of trails they have hiked and the distance of each hike is shown in the table.

Trail	Distance (in miles)
Bright Angel Trail	$7\frac{4}{5}$
Hoh River Trail	$35\frac{3}{10}$
John Muir Trail	$213\frac{7}{10}$
Mount Rogers Trail	$12\frac{2}{5}$

1. Morgan tracks his steps using a fitness tracker. He averages 2,000 steps for each mile. How many total steps did Morgan take when he hiked Bright Angel Trail?

$$2000 \cdot 7\frac{4}{5} = 2000 \cdot \frac{39}{5} = 400 \cdot 39 = 15,600 \text{ steps}$$

2. How much farther, in miles, was the Hoh River Trail hike than the Mount Rogers Trail hike?

$$35\frac{3}{10} - 12\frac{2}{5} = \frac{353}{10} - \frac{62}{5} = \frac{353}{10} - \frac{124}{10} = \frac{229}{10} = 22\frac{9}{10} \text{ miles}$$

3. How many total miles has the Tabb family hiked?

$$7\frac{4}{5} + 35\frac{3}{10} + 213\frac{7}{10} + 12\frac{2}{5} = 267 + 2\frac{1}{5} = 269\frac{1}{5} \text{ miles}$$

4. How much further, in miles, was the John Muir Trail hike than the Bright Angel Trail, Mount Rogers Trail and Hoh River Trail hikes combined?

$$213\frac{7}{10} - 55\frac{1}{2} = \frac{2137}{10} - \frac{111}{2} = \frac{2137}{10} - \frac{555}{10} = \frac{1582}{10} = 158\frac{1}{5} \text{ miles}$$

Use the following context to answer questions 5 – 8.

The Smith family took a vacation to Denver, Colorado. During their stay in Denver, the family did the following activities.

- Skied 4 different times. Each time they skied for $4\frac{1}{3}$ hours.
- Hiked 3 different times. Each time they hiked for $2\frac{5}{6}$ hours.
- Shopped for $7\frac{2}{3}$ hours.
- Visited the zoo for $6\frac{5}{6}$ hours.

5. How many more hours did the Smith family spend skiing than hiking?

$$\begin{aligned}\text{Skiing} &= 4 \cdot 4\frac{1}{3} = \frac{52}{3} & \frac{52}{3} - \frac{17}{2} &= \frac{104-51}{6} = \frac{53}{6} = 8\frac{5}{6} \text{ hours} \\ \text{Hiking} &= 3 \cdot 2\frac{5}{6} = \frac{17}{2}\end{aligned}$$

6. How many more hours did the Smith family spend hiking and shopping than visiting the zoo?

$$\begin{aligned}\text{Hiking} + \text{Shopping} &= \frac{17}{2} + 7\frac{2}{3} = \frac{97}{6} \text{ hours} \\ \frac{97}{6} - 6\frac{5}{6} &= \frac{28}{3} \text{ hours}\end{aligned}$$

7. How many hours did the Smith family spend skiing?

$$17\frac{1}{3} \text{ hours}$$

8. How many hours did the Smith family spend doing activities?

$$\frac{52}{3} + \frac{17}{2} + 7\frac{2}{3} + 6\frac{5}{6} = \frac{121}{3} \text{ hours}$$

9. Ivonne wanted to calculate how many hours she spent eating at restaurants during her vacation in New York City, New York. Ivonne visited 8 restaurants during her stay and spent approximately $\frac{5}{6}$ hour at each restaurant. How many total hours did she spend eating at restaurants during her vacation?

$$8 \cdot \frac{5}{6} = \frac{20}{3} = 6\frac{2}{3} \text{ hours}$$

10. Payton wants to determine how many hours she spent running in 2021. Payton calculated that she went on 102 runs in 2021, and each of those runs took $1\frac{1}{3}$ hours, on average. How many total hours did Payton spend running in 2021?

$$1\frac{1}{3} \text{ hours} = \frac{4}{3} \text{ hours} \qquad 102 \cdot \frac{4}{3} = \frac{408}{3} = 136 \text{ hours}$$
