

6th Grade Unit 2 Assessment Guide

General Information	The questions created for this assessment make every attempt to force students to use knowledge of the benchmarks assessed with minimal ability for guessing. If editing this assessment, keep in mind what information from student responses would provide you with a complete picture of a student's understanding while considering the possibility of a student guessing an answer. For example, using duplicate values or scenarios where patterns are easier to establish rather than the LCM process can provide students with the correct answer through methods outside the scope of the benchmark. Statewide assessments do not require students to rewrite answers in "simplest form". Consider accepting all answers that are equivalent.
Total Recommended Points	The total recommended points in this guide is 95 points. Teachers can either determine where best to use the extra 5 points or round the total value up to 100 points.

Question	1	Benchmark(s)	MA.6.NSO.3.1				
<table><tr><th>Greatest Common Factor</th><th>Least Common Multiple</th></tr><tr><td>8</td><td>120</td></tr></table>		Greatest Common Factor	Least Common Multiple	8	120	Recommended Scoring (10 Total Points)	Suggested points are 5 points for the correct GCF and 5 points for the correct LCM. Consider partial credit if students get the correct answers in the wrong part of the table.
		Greatest Common Factor	Least Common Multiple				
		8	120				
		Additional Notes	If students get the correct answers but put them under the wrong labels, this could be a minor error or a misunderstanding of terms.				

Question	2	Benchmark(s)	MA.6.NSO.3.1
Number of Hours: 18		Recommended Scoring (5 Total Points)	Consider partial credit if a student shows work that identifies multiples but doesn't put the least common multiple in the answer box.
Question	3	Benchmark(s)	MA.6.NSO.3.2
☐ $3(3 + 25)$ ☐ $3(9 + 25)$ ☒ $9(70 + 5)$ ☒ $9(5 + 70)$ ☐ $75(9 + 1)$ ☒ $75(3 + 6)$		Recommended Scoring (15 Total Points)	Suggested points is 5 points for each correct selection. Deduct 3 points if a student adds one extra choice. If a student chooses all the choices, consider no credit.
		Additional Notes	It's important to note that high-stakes tests will often not award partial credit and will be "all-or-nothing" scoring.
Question	4	Benchmark(s)	MA.6.NSO.3.2
<i>Answers will vary.</i> <i>Possible responses:</i> $8(5 + 18)$ $4(10 + 46)$ $2(20 + 72)$		Recommended Scoring (9 Total Points)	Suggested points for this question is 9 points. Consider each value as worth 3 points.
		Additional Notes	Students who write an equivalent expression with a correct factor may struggle with multiplication facts.

Question	5	Benchmark(s)	MA.6.NSO.2.2
$\frac{3}{20}$		Recommended Scoring (5 Total Points)	Suggested points for this question is 5 points. Consider student work for partial credit.
Question	6a	Benchmark(s)	MA.6.NSO.2.1
132.4121		Recommended Scoring (5 Total Points)	Suggested points is 5 points for the correct answer. Consider student work for partial credit. Consider awarding 4 points for one minor error in their work that resulted in the incorrect answer, but the rest of the work is correct.
Question	6b	Benchmark(s)	MA.6.NSO.2.1
16.7		Recommended Scoring (5 Total Points)	Suggested points is 5 points for the correct answer. Consider awarding 4 points for one minor error in their work that resulted in the incorrect answer, but the rest of the work is correct.

Question	7	Benchmark(s)	MA.6.NSO.2.1
9		Recommended Scoring (5 Total Points)	Suggested points is 5 points for the correct answer.
		Additional Notes	Consider awarding partial credit for student work that shows students on the right track but making a minor error in the calculations or set-up. Students may try to work the multiplication backwards to find the missing digit and some students will try to do division to find the missing digit.
Question	8	Benchmark(s)	MA.6.NSO.2.2
$1\frac{29}{36}$		Recommended Scoring (5 Total Points)	Suggested points for this question is 5 points. Consider awarding 4 points for one minor error in their work that resulted in the incorrect answer.
		Additional Notes	Students may leave the fraction in improper form. Any equivalent form of the correct answer should be accepted as full credit.

Question	9	Benchmark(s)	MA.6.NSO.2.2
	A. $\frac{2}{5} \times 1\frac{1}{4}$ B. $2\frac{1}{5} \times \frac{6}{10}$ C. $\frac{1}{5} \times 3\frac{1}{5}$ D. $1\frac{1}{6} \times \frac{7}{20}$	Recommended Scoring (5 Total Points)	Suggested total points is 5 points. Consider awarding 4 points for one minor error in their work that resulted in the incorrect answer.
Question	10	Benchmark(s)	MA.6.NSO.2.2
	$\frac{7}{24}$	Recommended Scoring (5 Total Points)	Suggested total points is 5 points. Consider awarding 4 points for one minor error in their work that resulted in the incorrect answer.
Question	11	Benchmark(s)	MA.6.NSO.2.1
	1.5	Recommended Scoring (5 Total Points)	Suggested total points is 5 points. Consider awarding 4 points for one minor error in their work that resulted in the incorrect answer.

Question		12						Benchmark(s)	MA.6.NSO.2.2
$\frac{5}{8} \div \frac{2}{3}$ $\frac{2}{3} \times \frac{5}{6}$ $\left(\frac{3}{4}\right)\left(\frac{1}{4}\right)$ $\frac{4}{9} \div \frac{3}{2}$	$\frac{4}{8}$	$\frac{7}{9}$	$\frac{3}{16}$	$\frac{15}{16}$	$\frac{10}{18}$	$\frac{10}{24}$	$\frac{8}{27}$	Recommended Scoring (16 Total Points)	Suggested points are 4 points for each correct match for a total of 16 points.
	☐	☐	☐	☒	☐	☐	☐	Additional Notes	This question is assessing fluency. Often students add numerators and denominators. Look for how often your students make this error to consider if your students need further remediation.
