

Explain why each inequality statement is true or false.

1. $\frac{4}{3} > -2\frac{1}{4}$

2. $-\frac{5}{8} > -\frac{2}{3}$

A set of rational numbers is shown.

$$-\frac{2}{5}, \quad 1\frac{1}{2}, \quad \frac{4}{3}, \quad -\frac{1}{4}$$

3. Plot each of the values on the number line. Label each point with its numeric value.

4. Complete the inequality statement to show the relationship between the values.

_____ < _____ < _____ < _____

A set of rational numbers is shown.

$$-1\frac{2}{3}, \quad -1.8, \quad \frac{7}{8}, \quad -\frac{3}{5}, \quad 0.75$$

5. Plot each of the values on the number line. Label each point with its numeric value.

6. Complete the inequality statement to show the relationship between the values.

_____ < _____ < _____ < _____ < _____

Complete each statement using $<$, $>$, or $=$.

7. $-\frac{7}{5}$ _____ $-1\frac{2}{5}$

8. -1.4 _____ $-\frac{3}{2}$

9. Order the values from least to greatest.

$$-2\frac{2}{3}, \quad \frac{11}{4}, \quad -\frac{9}{2}, \quad -\frac{3}{5}, \quad 0, \quad 2\frac{1}{3}$$

10. Order the values from least to greatest.

$$-3.75, \quad \frac{5}{3}, \quad -3\frac{4}{5}, \quad -2.6, \quad 2\frac{3}{5}$$
