

Grade 6
Unit 4
Lesson 4 Practice

Name Answer Key
Date _____
Period _____

Explain why each inequality statement is true or false.

1. $\frac{4}{3} > -2\frac{1}{4}$

Because $\frac{4}{3}$ is positive and therefore greater than $-2\frac{1}{4}$.

2. $-\frac{5}{8} > -\frac{2}{3}$ $\frac{-15}{24} > \frac{-16}{24}$

Because when compared with like denominators -15 is greater than -16 so $-\frac{5}{8}$ is greater than $-\frac{2}{3}$.

A set of rational numbers is shown.

$$\begin{array}{cccc} -\frac{2}{5}, & 1\frac{1}{2}, & \frac{4}{3}, & -\frac{1}{4} \\ -0.4 & 1.5 & 1.\bar{3} & -0.25 \end{array}$$

3. Plot each of the values on the number line. Label each point with its numeric value.

4. Complete the inequality statement to show the relationship between the values.

$$-\frac{2}{5} < -\frac{1}{4} < \frac{4}{3} < 1\frac{1}{2}$$

A set of rational numbers is shown.

$$-1\frac{2}{3}, \quad -1.8, \quad \frac{7}{8}, \quad -\frac{3}{5}, \quad 0.75$$

5. Plot each of the values on the number line. Label each point with its numeric value.

6. Complete the inequality statement to show the relationship between the values.

$$-1.8 < -1\frac{2}{3} < -\frac{3}{5} < 0.75 < \frac{7}{8}$$

Complete each statement using $<$, $>$, or $=$.

7. $-\frac{7}{5} = -1\frac{2}{5}$

8. $-1.4 > -\frac{3}{2}$

9. Order the values from least to greatest.

$$\begin{array}{cccccc} -2.\bar{6} & 2.75 & -4.5 & -0.6 & 0 & 2.\bar{3} \\ -2\frac{2}{3}, & \frac{11}{4}, & -\frac{9}{2}, & -\frac{3}{5}, & 0, & 2\frac{1}{3} \\ -\frac{9}{2}, & -2\frac{2}{3}, & -\frac{3}{5}, & 0, & 2\frac{1}{3}, & \frac{11}{4} \end{array}$$

10. Order the values from least to greatest.

$$\begin{array}{ccc} 1\frac{2}{3} & -3.8 & 2.6 \\ -3.75, & \frac{5}{3}, & -3\frac{4}{5}, & -2.6, & 2\frac{3}{5} \\ -3\frac{4}{5}, & -3.75, & -2.6, & \frac{5}{3}, & 2\frac{3}{5} \end{array}$$
