

Grade 6
Unit 4
Lesson 9 Practice

Name Answer Key
Date _____
Period _____

Priya and Zeke are biking along the Tampa Riverwalk. Priya's velocity is 21.5 miles per hour, and Zeke's velocity is -23 miles per hour.

1. Explain how it is possible to have a negative velocity.

Zeke can be traveling in the opposite direction as Priya.

2. What do the absolute values of the bikers' velocities mean in this context?

The absolute value describes the speed the bikers are traveling at.

3. Who is biking faster? Explain how you know.

Zeke is biking faster as $|21.5| < |-23|$.

Hamill owes his parents \$15 dollars.

4. Plot and label the rational number that represents this situation.

5. What does the absolute value mean in this context?

The absolute value means Hamill owes \$15.

Raechelle makes a withdrawal of \$59.74 from her checking account.

6. Model Raechelle’s transaction on the number line.

−59.74

7. What does the absolute value of Raechelle’s transaction mean in this context?

The absolute value is the amount of money involved in the transaction.

8. From noon to midnight, the temperature change in Lakeland, FL was -8.5°F . What does the value $|-8.5|^{\circ}\text{F}$ mean in this context?

That the degrees of temperature change is 8.5.

9. Describe the meaning of each value in the context of elevation.

Value	Interpretation
5,362 feet	5,362 ft above sea level
−743 feet	743 ft below sea level
$ 67 $ feet	67 ft above sea level
$ -3,918 $ feet	3,918 ft below sea level

10. The absolute value of Amarya’s account balance is \$75.88. What could be Amarya’s account balance?

It could be \$75.88 or $-\$75.88$
